

Module Handbook

Water Science and Engineering (Master of Science (M.Sc.), ER/SPO 2016)

Summer term 2023

Date: 17/03/2023

KIT DEPARTMENT OF CIVIL ENGINEERING, GEO- AND ENVIRONMENTAL SCIENCES

Table Of Contents

1. Curriculum	7
1.1. Objectives of the master degree program	7
1.2. Structure of the master degree program	8
1.2.1. Advanced Fundamentals (AF), compulsory subject	9
1.2.2. Cross-Cutting Methods & Competencies (CC), compulsory subject	10
1.2.3. Profile Studies (P)	11
1.2.4. Study Project, compulsory subject	15
1.2.5. Master's Thesis/Masterarbeit	15
1.2.6. Interdisciplinary Qualifications	15
1.2.7. Additional accomplishments	15
1.3. Module selection, individual curriculum & mentoring	16
1.4. Exams and Learning Controls	16
1.4.1. Registration	16
1.4.2. Cancellation	16
1.4.3. Repetition	16
1.5. Recognition of accomplishments	17
1.5.1. Recognition of already obtained credits	17
1.5.2. Accomplishments obtained outside of the Higher Education System	17
1.6. Calculation of grades, final grade	17
1.7. Semester abroad	17
1.8. Special circumstances	17
2. Contact persons	18
3. Current changes	19
4. Modules	20
4.1. Modeling of Water and Environmental Systems [WSEM-AF101] - M-BGU-103374	20
4.2. Fundamentals of Water Quality [WSEM-AF201] - M-CIWVT-103438	21
4.3. Urban Water Infrastructure and Management [WSEM-AF301] - M-BGU-103358	22
4.4. Advanced Fluid Mechanics [WSEM-AF401] - M-BGU-103359	24
4.5. Numerical Fluid Mechanics [WSEM-AF501] - M-BGU-103375	25
4.6. Hydraulic Engineering [WSEM-AF601] - M-BGU-103376	26
4.7. Water and Energy Cycles [WSEM-AF701] - M-BGU-103360	28
4.8. Hydrogeology [WSEM-AF801] - M-BGU-103406	30
4.9. Freshwater Ecology [WSEM-CC371] - M-BGU-104922	31
4.10. Experiments in Fluid Mechanics [WSEM-CC471] - M-BGU-103377	33
4.11. Fundamental Numerical Algorithms for Engineers [WSEM-CC571] - M-BGU-104920	35
4.12. Introduction to Matlab [WSEM-CC772] - M-BGU-103381	36
4.13. Analysis of Spatial Data [WSEM-CC773] - M-BGU-103762	38
4.14. Introduction to Environmental Data Analysis and Statistical Learning [WSEM-CC774-ENVDAT] - M-BGU-104880 ..	40
4.15. Integrated Infrastructure Planning [WSEM-CC791] - M-BGU-103380	42
4.16. Environmental Communication [WSEM-CC792] - M-BGU-101108	44
4.17. Probability and Statistics [WSEM-CC911] - M-MATH-103395	45
4.18. Numerical Mathematics for Students of Computer Science and Engineering [WSEM-CC912] - M-MATH-103404 ..	46
4.19. Instrumental Analysis [WSEM-CC921] - M-CIWVT-103437	47
4.20. Remote Sensing and Positioning [WSEM-CC931] - M-BGU-103442	49
4.21. Introduction to GIS for Students of Natural, Engineering and Geo Sciences [WSEM-CC933] - M-BGU-101846 ..	51
4.22. Geodata Infrastructures and Web-Services [WSEM-CC935] - M-BGU-101044	52
4.23. Introduction to Python [WSEM-CC936] - M-BGU-106199	53
4.24. Language Skills 1 (2 CP) [WSEM-CC949] - M-BGU-103466	54
4.25. Water Technology [WSEM-PA221] - M-CIWVT-103407	55
4.26. Membrane Technologies in Water Treatment [WSEM-PA222] - M-CIWVT-105380	56
4.27. Practical Course in Water Technology [WSEM-PA223] - M-CIWVT-103440	58
4.28. Biofilm Systems [WSEM-PA224] - M-CIWVT-103441	60
4.29. Industrial Wastewater Treatment [WSEM-PA226] - M-CIWVT-105903	61
4.30. Wastewater Treatment Technologies [WSEM-PA321] - M-BGU-104917	62
4.31. Stormwater Management [WSEM-PA322] - M-BGU-106112	64
4.32. Modeling Wastewater Treatment Processes [WSEM-PA323] - M-BGU-106113	66
4.33. Water Distribution Systems [WSEM-PA621] - M-BGU-104100	68
4.34. Applied Microbiology [WSEM-PA982] - M-CIWVT-103436	70
4.35. Environmental Fluid Mechanics [WSEM-PB421] - M-BGU-103383	71

4.36. Advanced Computational Fluid Dynamics [WSEM-PB522] - M-BGU-103384	72
4.37. Fluid Mechanics of Turbulent Flows [WSEM-PB523] - M-BGU-105361	74
4.38. Modeling of Turbulent Flows - RANS and LES [WSEM-PB524] - M-BGU-105362	75
4.39. Hydraulic Structures [WSEM-PB631] - M-BGU-103389	76
4.40. River Processes [WSEM-PB634] - M-BGU-105927	78
4.41. Experimental Hydraulics and Measurement Techniques [WSEM-PB642] - M-BGU-106114	80
4.42. Numerical Flow Modeling in Hydraulic Engineering [WSEM-PB651] - M-BGU-103390	82
4.43. Hydro Power Engineering [WSEM-PB653] - M-BGU-100103	83
4.44. Waterway Engineering [WSEM-PB655] - M-BGU-103392	84
4.45. Project Studies in Water Resources Management [WSEM-PB661] - M-BGU-103394	85
4.46. River Basin Modeling [WSEM-PC341] - M-BGU-103373	86
4.47. Groundwater Management [WSEM-PC561] - M-BGU-100340	88
4.48. Integrated Design Project in Water Resources Management [WSEM-PC722] - M-BGU-105637	90
4.49. Subsurface Flow and Contaminant Transport [WSEM-PC725] - M-BGU-103872	92
4.50. Hydrological Measurements in Environmental Systems [WSEM-PC732] - M-BGU-103763	94
4.51. Deep Learning in Hydrological Modeling [WSEM-PC733] - M-BGU-105994	95
4.52. Protection and Use of Riverine Systems [WSEM-PC762] - M-BGU-103401	97
4.53. Hydrogeology: Field and Laboratory Methods [WSEM-PC821] - M-BGU-102441	99
4.54. Karst Hydrogeology [WSEM-PC842] - M-BGU-105790	100
4.55. Sustainable Management of rivers and Floodplains [WSEM-PC986] - M-BGU-103391	102
4.56. Module Master's Thesis [WSE-MSC-THESIS] - M-BGU-104995	103
4.57. Thermal Use of Groundwater [WSEM-SM879] - M-BGU-103408	104
4.58. Earthwork and Embankment Dams [WSEM-SM961] - M-BGU-103402	105
4.59. Environmental Geotechnics [WSEM-SM962] - M-BGU-100079	106
4.60. General Meteorology [WSEM-SM971] - M-PHYS-103732	108
4.61. Applied Meteorology: Turbulent Diffusion [WSEM-SM974] - M-PHYS-105776	109
4.62. Study Project [WSEM-SP111] - M-BGU-103439	110
4.63. Supplementary Studies on Culture and Society - M-ZAK-106235	111
4.64. Supplementary Studies on Sustainable Development - M-ZAK-106099	114
5. Courses	117
5.1. Advanced Fluid Mechanics - T-BGU-106612	117
5.2. Applied Ecology and Water Quality - T-BGU-109956	118
5.3. Basics Module - Self Assignment BAK - T-ZAK-112653	119
5.4. Basics Module - Self Assignment BeNe - T-ZAK-112345	120
5.5. Biofilm Systems - T-CIWVT-106841	121
5.6. Booklet Integrated Infrastructure Planning - T-BGU-106763	122
5.7. Brownfield Sites - Investigation, Evaluation, Rehabilitation - T-BGU-100089	123
5.8. Deep Learning in Hydrological Modeling - T-BGU-112171	124
5.9. Design Exercise Hydraulic Structures - T-BGU-111929	125
5.10. Design Exercise River Engineering - T-BGU-111928	126
5.11. Earthwork and Embankment Dams - T-BGU-106792	127
5.12. Elective Module - Subject, Body, Individual: the Other Side of Sustainability - Self Assignment BeNe - T-ZAK-112349	128
5.13. Elective Module - Sustainability Assessment of Technology - Self Assignment BeNe - T-ZAK-112348	129
5.14. Elective Module - Sustainability in Culture, Economy and Society - Self Assignment BeNe - T-ZAK-112350	130
5.15. Elective Module - Sustainable Cities and Neighbourhoods - Self Assignment BeNe - T-ZAK-112347	131
5.16. Environmental Biotechnology - T-CIWVT-106835	132
5.17. Environmental Communication - T-BGU-101676	133
5.18. Environmental Fluid Mechanics - T-BGU-106767	134
5.19. Examination on Turbulent Diffusion - T-PHYS-109981	135
5.20. Examination Prerequisite Environmental Communication - T-BGU-106620	136
5.21. Excursions: Membrane Technologies - T-CIWVT-110864	137
5.22. Excursions: Water Supply - T-CIWVT-110866	138
5.23. Experimental Hydraulics - T-BGU-112374	139
5.24. Experiments in Fluid Mechanics - T-BGU-106760	140
5.25. Field Training Water Quality - T-BGU-109957	141
5.26. Field Trip Karst Hydrogeology - T-BGU-110413	142
5.27. Flow Measurement Techniques - T-BGU-110411	143
5.28. Fluid Mechanics of Turbulent Flows - T-BGU-110841	144
5.29. Fundamental Numerical Algorithms for Engineers - T-BGU-109953	145
5.30. Fundamentals of Environmental Geodesy Part B - T-BGU-109329	146
5.31. Fundamentals of Water Quality - T-CIWVT-106838	147

5.32. General Meteorology - T-PHYS-101091	148
5.33. Geo Data Infrastructures and Web Services - T-BGU-101756	149
5.34. Geodata Infrastructures and Web-Services, Prerequisite - T-BGU-101757	150
5.35. Geostatistics - T-BGU-106605	151
5.36. Groundwater Flow around Structures - T-BGU-106774	152
5.37. Groundwater Hydraulics - T-BGU-100624	153
5.38. Homework 'Introduction to Environmental Data Analysis and Statistical Learning' - T-BGU-109950	154
5.39. Hydraulic Engineering - T-BGU-106759	155
5.40. Hydro Power Engineering - T-BGU-100139	156
5.41. Hydrogeology - T-BGU-106801	157
5.42. Hydrogeology: Field and Laboratory Methods - T-BGU-104834	158
5.43. Hydrological Measurements in Environmental Systems - T-BGU-106599	159
5.44. In-depth Module - Doing Culture - Self Assignment BAK - T-ZAK-112655	160
5.45. In-depth Module - Global Cultures - Self Assignment BAK - T-ZAK-112658	161
5.46. In-depth Module - Media & Aesthetics - Self Assignment BAK - T-ZAK-112656	162
5.47. In-depth Module - Spheres of Life - Self Assignment BAK - T-ZAK-112657	163
5.48. In-depth Module - Technology & Responsibility - Self Assignment BAK - T-ZAK-112654	164
5.49. Industrial Wastewater Treatment - T-CIWVT-111861	165
5.50. Instrumental Analytics - T-CIWVT-106837	166
5.51. Integrated Design Project in Water Resources Management - T-BGU-111275	167
5.52. Integrated Infrastructure Planning - T-BGU-106764	168
5.53. Interaction Flow - Hydraulic Structures - T-BGU-110404	169
5.54. Introduction to Environmental Data Analysis and Statistical Learning - T-BGU-109949	170
5.55. Introduction to GIS for Students of Natural, Engineering and Geo Sciences - T-BGU-101681	171
5.56. Introduction to GIS for Students of Natural, Engineering and Geo Sciences, Prerequisite - T-BGU-103541	172
5.57. Introduction to Matlab - T-BGU-106765	173
5.58. Introduction to Python - T-BGU-112598	174
5.59. Karst Hydrogeology - T-BGU-111592	175
5.60. Landfills - T-BGU-100084	176
5.61. Mass Fluxes in River Basins - T-BGU-111061	177
5.62. Master's Thesis - T-BGU-110134	178
5.63. Membrane Technologies in Water Treatment - T-CIWVT-110865	179
5.64. Methods of Remote Sensing, Prerequisite - T-BGU-101759	180
5.65. Microbiology for Engineers - T-CIWVT-106834	181
5.66. Modeling of Turbulent Flows - RANS and LES - T-BGU-110842	182
5.67. Modeling of Water and Environmental Systems - T-BGU-106757	183
5.68. Modeling Wastewater Treatment Processes - T-BGU-112371	184
5.69. Numerical Flow Modeling in Hydraulic Engineering - T-BGU-106776	185
5.70. Numerical Fluid Mechanics - T-BGU-106758	186
5.71. Numerical Fluid Mechanics II - T-BGU-106768	187
5.72. Numerical Groundwater Modeling - T-BGU-100625	188
5.73. Numerical Mathematics for Students of Computer Science - T-MATH-102242	189
5.74. Oral Exam - Supplementary Studies on Culture and Society - T-ZAK-112659	190
5.75. Oral Exam - Supplementary Studies on Sustainable Development - T-ZAK-112351	191
5.76. Organic Trace Analysis of Aqueous Samples - T-CIWVT-106836	192
5.77. Parallel Programming Techniques for Engineering - T-BGU-106769	193
5.78. Practical Course in Water Technology - T-CIWVT-106840	194
5.79. Practice Module - T-ZAK-112660	195
5.80. Prerequisite Protection and Use of Riverine Systems - T-BGU-106790	196
5.81. Presentation 'Urban Water Infrastructure and Management' - T-BGU-112369	197
5.82. Probability and Statistics - T-MATH-106784	198
5.83. Project Report Water Distribution Systems - T-BGU-108485	199
5.84. Project Studies in Water Resources Management - T-BGU-106783	200
5.85. Protection and Use of Riverine Systems - T-BGU-106791	201
5.86. Remote Sensing and Positioning - T-BGU-106843	202
5.87. River and Floodplain Ecology - T-BGU-102997	203
5.88. River Basin Modeling - T-BGU-106603	204
5.89. River Processes - T-BGU-111930	205
5.90. Seminar Paper 'Waterway Engineering' - T-BGU-106779	206
5.91. Specialisation Module - Self Assignment BeNe - T-ZAK-112346	207
5.92. Stormwater Management - T-BGU-112370	208
5.93. Study Project - T-BGU-106839	209

5.94. Thermal Use of Groundwater - T-BGU-106803	210
5.95. Transport and Transformation of Contaminants in Hydrological Systems - T-BGU-106598	211
5.96. Turbulent Diffusion - T-PHYS-111427	212
5.97. Urban Water Infrastructure and Management - T-BGU-106600	213
5.98. Wastewater Treatment Technologies - T-BGU-109948	214
5.99. Water and Energy Cycles - T-BGU-106596	215
5.100. Water Distribution Systems - T-BGU-108486	216
5.101. Water Technology - T-CIWVT-106802	217
5.102. Waterway Engineering - T-BGU-106780	218
5.103. Wetlands - T-BGU-112845	219
5.104. Wildcard 1 Language Skills 1 - T-BGU-106884	220
5.105. Wildcard 2 Language Skills - T-BGU-106885	221
6. Example Curricula.....	222

1 Curriculum

This module handbook is the key document describing the structure and the contents of the master's degree program Water Science & Engineering, and thus provides helpful information and guidance for planning the studies. The degree program and its subjects and modules are described in detail, providing the necessary information for planning an interdisciplinary course of studies tailored to each student's personal interests and needs.

Within the Curriculum (Chapt. 1) the organization of the degree program and further formalities are specified in addition to the general examination regulations (ER/SPO). For example, the assignments of modules to the compulsory and compulsory elective subjects are listed. The current examination regulation (ER/SPO) and potential amendments of these regulations can be found on the web <https://www.sle.kit.edu/english/vorstudium/master-water-science-engineering.php> (in German).

Another key function of the module handbook is the compilation of module descriptions (Chapt. 4), which provides information on the requirements and recommendations for the modules. Details about the learning controls are described at the so-called 'Teilleistungen' (Chapt. 5). Links are also provided to the respective courses in the [online course catalog](#) which should be attended for taking the learning controls.

1.1 Objectives of the master degree program

The master's degree program **Water Science & Engineering** offers an interdisciplinary, research-oriented education at the interface of water-related engineering and natural sciences. Graduates are able to develop strategies and technical solutions for sustainable water resources management. This includes an efficient use of limited water resources, implementing increasing requirements for the protection of water bodies, handling of hydro-meteorological extreme events, and mitigating the impacts of global change on the water cycle and related material cycles. Graduates are qualified for a responsible position in planning offices and engineering companies, industrial enterprises, public authorities, international development cooperation, and research and development. They acquire qualifications that allow pursuing doctoral studies.

Graduates acquire broad and in-depth knowledge of water-related scientific and engineering fundamentals, extending their prior knowledge acquired during their bachelor degree program. The lectures and classes on 'Advanced Fundamentals' are complemented by lectures and classes on engineering and scientific methods as well as interdisciplinary competencies ('Cross Cutting Methods & Competencies'). Graduates are able to transform their theoretical knowledge into quantitative approaches for the balancing of systems and to solve them analytically and numerically. They can precisely describe relevant circumstances in the environment, and represent specialized solutions to both experts as well as laypersons in an understandable form. Through practical exercises in laboratories, in computer pools or field work, graduates acquire the ability to apply methods on their own in specific contexts. They have sound knowledge of the analysis of time- and space-related data, the design of experiments, and the assessment of uncertainties of measurement and model results. The methods and practices used can be reflected and adapted to changing conditions.

The specialization area is made up of the four profiles 'Water Technologies & Urban Water Cycle', 'Fluid Mechanics & Hydraulic Engineering', 'Environmental System Dynamics & Management', and 'Water Resources Engineering', which are oriented towards current job profiles. Within the 'Profile Studies', graduates acquire the competence to link the fundamental and advanced knowledge with engineering applications in their selected field. They are thus able to transfer their expertise into the development of innovative technologies and management concepts. Supplementary modules also offer the possibility to complement the specialization with skills from neighboring scientific and engineering disciplines.

The competence to work out structured solutions is further promoted by an interdisciplinary 'Study Project', in which the theoretical knowledge and skills are applied to deal with a specific problem.

Graduates in Water Science & Engineering have a broad knowledge and in-depth expertise in their subject, comprehensive methodological competences, and a sound understanding of complex interactions in environmental systems. They are able to apply a range of analytical, experimental, technical and planning methods to fulfill their tasks in solving water-related problems in consideration of social and economic criteria. They deal autonomously with the current state of research and are able to analyze complex problems and select adequate methods for target-oriented solutions. As teaching is predominantly in English and students collaborate in international teams, graduates are also able to communicate their research findings in an international framework.

1.2 Structure of the master degree program

The master degree program Water Science & Engineering comprises 120 credit points (CP) and is structured in the subjects

- Advanced Fundamentals, AF (27 CP), compulsory subject
- Cross-Cutting Methods & Competencies, CC (12 CP), compulsory subject
- Profile Studies, P (36 CP), compulsory elective subject
 - PA Water Technologies & Urban Water Cycle
 - PB Fluid Mechanics & Hydraulic Engineering
 - PC Environmental System Dynamics & Management
 - PD Water Resources Engineering
- Study Project, SP (15 CP), compulsory subject

as well as the preparation of the Master's Thesis to the extent of 30 CP (Figure 1).

Figure 1: Structure of the master degree program Water Science & Engineering.

1.2.1 Advanced Fundamentals (AF), compulsory subject

In this subject, 'Advanced Fundamentals' of water-related engineering and natural sciences are taught to the extent of 27 CP. The modules assigned to this subject are listed in Table 1. The module 'Modeling of Water and Environmental Systems (AF101)' is compulsory for all students. They further choose four out of seven subject-specific modules – according to their fields of interest and their selected specialization (cf. 'Profile Studies'). It is advisable to include the basic modules for the chosen profile; which are:

- for Profile A: AF201 and AF301
- for Profile B: AF401, AF501 and AF601
- for Profile C: AF701 and AF801

Table 1: Modules AF – Advanced Fundamentals

Module			Course				LC	
Code	Name	LP	Name (Language)	Type	HpW / SWS	Type	CP	
(WSEM-)					W	S		
<i>compulsory module:</i>								
AF101:	Modeling of Water and Environmental Systems	3	Modeling of Water and Environmental Systems (E)	L	2		ngA	3
<i>compulsory elective modules:</i>								
AF201:	Fundamentals of Water Quality	6	Fundamentals of Water Quality (E)	L/E	2/1		wE	6
AF301:	Urban Water Infrastructure and Management	6	Urban Water Infrastructure and Management (E)	L/E	4		ngA ²⁾ wE	2 4
AF401:	Advanced Fluid Mechanics	6	Advanced Fluid Mechanics (E)	L/E		4	wE	6

AF601:	Hydraulic Engineering	6	River Engineering (E)	L/E		2	ngA ²⁾	1
			Design of Hydraulic Structures (E)	L/E		2	ngA ²⁾ wE	1 4
AF701:	Water and Energy Cycles	6	Water and Energy Cycles in Hydrological Systems: Processes, Predictions and Management (E)	L/E	4		EoT	6
AF801:	Hydrogeology ¹⁾	6	General and Applied Hydrogeology (E)	L/E		2	wE	6
			Field Methods in Hydrogeology (E)	L/E	1			

explanations to Table 1:

general:

- LC learning control
 CP credit point
 HpW / SWS hours per week
 W / S winter term / summer term
 G / E language German / English
 1) Starting the module in summer term (S) is recommended.

type of course:

- L lecture
 L/E lecture and exercise, separate or integrated

type of learning control:

- wE written examination
 EoT examination of other type
 ngA not graded accomplishment
 ngA²⁾ not graded accomplishment as examination prerequisite

1.2.2 Cross-Cutting Methods & Competencies (CC), compulsory subject

The scientific education is complemented by a comprehensive education in interdisciplinary methods and technical skills. Students select modules of at least 12 CP in total from the options in Table 2. In line with the international orientation of the program, language courses of up to 6 CP can be taken in the module 'Language Skills'.

Table 2: Modules CC - Cross-Cutting Methods & Competencies (CC)

Module			Course				LC	
Code	Name	LP	Name (Language)	Type	HpW / SWS		Type	CP
(WSEM-)					W	S		
CC471:	Experiments in Fluid Mechanics	6	Experiments in Fluid Mechanics (E)	L/E		4	EoT	6
CC773:	Analysis of Spatial Data	6	Geostatistics (E)	L/E		4	oE	6
CC774:	Introduction to Environmental Data Analysis and Statistical Learning	6	Introduction to Environmental Data Analysis and Statistical Learning (E)	L/E	4		ngA ²⁾ wE	2 4

1.2.3 Profile Studies (P)

The degree program provides opportunity for specialization within three areas of expertise in the sectoral profiles A - C . In addition, an education of generalists in water engineering is possible in the cross-sectoral profile D. Within the profile, modules of 36 CP have to be completed, of which at least 24 CP need to be covered by modules specific to the chosen profile (Tables 3 - 5). In addition, further 'Supplementary Modules' can be chosen.

Students choose one of the four profiles at the beginning of their studies. The choice of a profile results from the online registration for the first profile-specific exam.

Profile A: Water Technologies & Urban Water Cycle (PA), compulsory elective subject

The focus of this profile is on innovative technologies for the treatment of drinking water and wastewater, as well as the sustainable design of urban and decentralized water systems. This includes biological, chemical and physical processes of water treatment, as well as planning and dimensioning of infrastructure and facilities for water supply and wastewater disposal. In addition to the basic and advanced technological principles and applications, energy efficiency and economics are important aspects.

Students in the profile 'Water Technologies & Urban Water' select modules of at least 24 CP in total from the options in Table 3, and additional 'Supplementary Modules' if desired.

Table 3: Modules PA - Water Technologies & Urban Water Cycle

Module			Course				LC

 ngA²⁾ not graded accomplishment as examination prerequisite

Profile B: Fluid Mechanics & Hydraulic Engineering (PB), compulsory elective subject

The aim of this profile is to deepen advanced hydrodynamic principles, and amplify their application for flows in the environment as well as for planning and dimensioning of hydraulic structures for water management. Emphasis is laid on the preservation and regeneration of the structural quality of water bodies, under consideration of ecological aspects. Profound knowledge in physical and numerical modeling is imparted.

Students in the profile 'Fluid Mechanics & Hydraulic Engineering' select modules of at least 24 CP in total from the options in Table 4, and additional 'Supplementary Modules' if desired.

Table 4: Modules PB - Fluid Mechanics & Hydraulic Engineering

Profile C: Environmental System Dynamics & Management (PC), compulsory elective subject

This profile focuses on the processes of the water cycle in terrestrial systems and related matter and energy cycles. It also includes all aspects of integrated management of river basins, such as management strategies for the protection of surface and ground waters, the prediction of water-related extreme events, and the development of prevention and mitigation measures.

Students in the profile 'Environmental System Dynamics & Management' select modules of at least 24 CP in total from the options in Table 5, and additional 'Supplementary Modules' if desired.

Profile D: Water Resources Engineering (PD), compulsory elective subject

This profile aims at training generalists as the individual specialization. Consequently, it features a diversification into the topics of the three profiles A to C.

Students in the profile 'Water Resources Engineering' select modules of at least 24 CP in total from the options in Tables 3 to 5, and additional 'Supplementary Modules' if desired. At least one module from each of the three profiles A to C has to be chosen.

Supplementary Modules (SM)

The individual specialization within the profile studies can be complemented by electives in order to individualize the profile studies. For that purpose, 'Supplementary Modules' can be selected in addition to the respective profile-specific modules (at least 24 CP), in order to get the 36 CP within the Profile Studies.

All subject-specific modules of the program for which an examination has not already been taken can be chosen as 'Supplementary Modules'. These could thus be further modules from the chosen profile, from other profiles, or from the subjects AF and CC (with the exception of the module 'Language Skills CC949'). Alternatively, modules from related disciplines at KIT can be chosen, such as Geoecology, Meteorology, Civil Engineering (e.g. Geotechnical Engineering), Applied Geosciences (e.g. Engineering Geology), or Chemical and Process Engineering. Available 'Additional Supplementary Modules' from other disciplines are listed in Table 6.

The choice of 'Supplementary Modules' should be coordinated with the mentor. The mentor advises on suitable modules for the chosen orientation. Other modules from related disciplines compatible to the profile and not listed in Tables 1 to 6 in this handbook might come into consideration as 'Supplementary Modules'. This requires the compilation of an individual curriculum for the student, which needs to be approved by the mentor.

Table 6: Additional Supplementary Modules

Module			Course				LC	
Code	Name	LP	Name (Language)	Type	HpW / SWS	Type	CP

1.2.4 Study Project, compulsory subject

Students carry out an interdisciplinary '**Study Project**'. The project prepares students for independent scientific working and writing, and introduces skills in project management. The topics for the 'Study Project' should be especially located at the interfaces between the water-research disciplines of the KIT. In addition to the competence of combining approaches from different fields in the context of the project, they acquire abilities for teamwork and critical evaluation of results. 15 CP are credited for the 'Study Project'.

It is highly recommended to have acquired the necessary subject-specific and interdisciplinary competencies needed to work on the 'Study Project' beforehand.

The assignment of a research topic, supervision and evaluation of the 'Study Project' is carried out by a full-time faculty member of the KIT Department of Civil Engineering, Geo and Environmental Sciences or of the KIT Department of Chemical and Process Engineering, who is authorized to supervise a master's thesis. Students look for a supervisor from the field they are interested in. In exceptional cases and at request of the student, the spokesperson of the study program ensures that a topic is assigned within a four week period.

For registration the respective form (http://www.wasser.kit.edu/downloads/Pruef_ZulAnmeld_StudyProject_engl.pdf) with the admission by the [Study Program Service](#) of the department ('Studiengangservice Bau-Geo-Umwelt') is handed over to the supervisor when starting the 'Study Project'.

1.2.5 Master's Thesis/Masterarbeit

The **Master's Thesis** is an independent scientific study and includes the theoretical and/or experimental work on a complex problem. Students deal with the current state of research and apply the expertise and scientific methods acquired during the studies. They can document, discuss and evaluate the obtained results. Furthermore, they are able to present and defend the essential findings. The topic of the 'Master's Thesis' depends on the subject area that is chosen for the thesis. If the master's thesis is written outside of KIT, consider the instruction on 'Merkblatt - Externe Abschlussarbeiten' (http://www.haa.kit.edu/downloads/KIT_ALLGEMEIN_Merkblatt_Externe_Abschlussarbeiten.pdf; in German).

Generally, the 'Master's Thesis' is written during the 4th semester. In order to be admitted to the 'Master's Thesis', students must have successfully completed modules of at least 42 CP in the master's degree program *Water Science & Engineering*. The supervisor initiates the master's thesis to be uploaded to the campus management system. After notification via e-mail, the master's thesis has to be **registered online** in the portal Campus Management for Students. The **admission** follows after the required prerequisites and eventual further conditions are verified. As these steps have to be completed **before starting** the thesis (scheduled strating date), they should be initiated at least two weeks in advance. It is highly recommended to have acquired the necessary subject-specific and interdisciplinary competencies needed to work on the 'Master's Thesis' beforehand.

Students look for a supervisor from the field they are interested in who assigns the research topic for the 'Master's Thesis'. This person has to be a member of the KIT Department of Civil Engineering, Geo and Environmental Sciences or of the KIT Department of Chemical and Process Engineering as professor or habilitated faculty member or he/she is authorized to supervise a master's thesis as entitled research associate. In other cases a permission of the [Examination Committee Master Civil Engineering](#) is required using the respective form (s. <https://www.tmb.kit.edu/english/5583.php>, in German). Generally, the supervisor and a second examiner evaluate the thesis. For the assignment of the research topic, the interests of the student can be taken into account. In exceptional cases, the assignment of a research topic for the 'Master's Thesis' is arranged by the chairperson of the [Examination Committee Master Civil Engineering](#).

The preparation time is six months. The 'Master's Thesis' can be written in English or German. Within one month after submission it has to be completed with a presentation. The presentation is part of the examination and is considered within the evaluation.

1.2.6 Interdisciplinary Qualifications

Generic qualifications are taught along with the modules, especially in the subjects 'Cross Cutting Methods & Competencies' and 'Study Project'.

1.2.7 Additional accomplishments

An **additional accomplishment** is a voluntarily taken examination, which is not considered in the overall grade (comp. ER/SPO § 15). In total, additional accomplishments can be taken to the extent of max. 30 CP from offers within KIT.

The examination in the desired additional accomplishment should be registered online by the student within the registration period. Additional accomplishments available in the module [Further Examinations](#) can be selected directly. As from summer term 2023 two selectable additional modules are available for the Accompanying Studies of ZAK. If selecting one of these modules it has to be considered that the extent of possible further additional accomplishments is reduced by the extent of the selected ZAK module even if this is not completed. If the designated additional accomplishments or additional modules is not available in that list then this must be conveyed to the [Study Program Service](#) of the department ('Studiengangservice Bau-Geo-Umwelt') via e-mail. The desired selection will then be available in the campus management system enabling the online exam registration. The assignment can be changed later by sending a request to the [Examination Committee Master Civil Engineering](#).

All additional accomplishments are listed in the transcript of records. Completed modules can be included in the master degree certificate as additional modules if requested by the student. This also applies to additional accomplishments recognized by the [Examination Committee Master Civil Engineering](#).

1.3 Module selection, individual curriculum & mentoring

The compulsory and compulsory elective subjects are developed by the selection of modules within a specified framework. Each module consists of one or more interrelated courses and is completed by one or more examinations. The extent of a module is determined by credit points (CP) which are credited after passing the module successfully. In addition to the descriptions in the module handbook, the course catalog (online) and the postings and web pages of the institutes inform about the current details every semester (e.g. time and location of courses).

The selection options within the studies require that each student compiles an individual curriculum. The selection of the modules have to be made with care. This selection is supervised by a mentor chosen by the student at the beginning of the studies. The mentor has to be a professor of the KIT Department Civil Engineering, Geo and Environmental Sciences or of the KIT Department of Chemical and Process Engineering and has to be involved in the degree program *Water Science & Engineering*. Possible mentors are:

Prof. O. Eiff, Prof. M. Franca, Prof. N. Goldscheider, Prof. H. Horn, Prof. M. Uhlmann, Prof. E. Zehe,
PD U. Ehret, PD S. Fuchs, PD U. Mohrlök

If modules shall be selected within the compulsory and compulsory elective subjects others than listed in Tables 1 to 6 the individual curriculum need to be approved by the mentor and to be announced to the [Study Advisor](#). Exemplary curricula can be found in the appendix.

1.4 Exams and Learning Controls

The successful completion of modules is checked by learning controls, which can be graded or not graded. Graded learning controls are written exams (wE), oral exams (oE), or examinations of other type (EoT). Not graded accomplishments (ngA) are course-related performances in written, oral or practical form.

1.4.1 Registration

The students must register for learning controls online in the portal Campus Management for Students. The examiners can define prerequisites and deadlines for the registration. Upon registration, students have to declare the assignment of the respective module to a subject, as far as options exist. In the case of an oral examination, the online registration has directly to be combined with the negotiation of an examination date with the examiner.

A successful online registration covers the admission to the examination. The portal Campus Management for Students provides the confirmation, which can serve as proof of registration in case of doubt. If problems occur with an online registration, the [Study Program Service](#) of the department ('Studiengangservice Bau-Geo-Umwelt') as well as the examiner have to be informed as soon as possible to solve the problem in advance of examination date.

A registered examination either has to be taken or canceled in advance to the deadline of cancelation.

1.4.2 Cancellation

Students may cancel their registration for written exams (wE) without giving reasons until the examination questions are handed out.

When canceling oral examinations (oE), the examiner must be informed at least three working days prior to the examination date.

Canceling of examinations of other type (EoT) as well as of not graded accomplishments (ngA) is possible up to the rendering of the respective performance or the first part of the performance. The submission of a written work (report, homework or similar) or the beginning of an oral exam (presentation, colloquium or similar) counts as rendering the performance. If deadlines are set, a cancellation can only be made in advance.

In general, a cancellation shall be made nevertheless online in time.

A later cancellation or withdrawal must be justified by valid reasons, and requires submitting a written declaration to the [Examination Committee Master Civil Engineering](#) immediately.

1.4.3 Repetition

A failed examination (wE, oE, EoT) can be repeated once in the same form. If the retake of a written exam is failed again, an oral examination takes place, in which at best the grade Passed can be achieved. Failed exams have to be retaken by the end of the examination period of the semester after the following semester.

Not graded accomplishments (ngA) may be repeated several times.

1.5 Recognition of accomplishments

1.5.1 Recognition of already obtained credits

The recognition of already obtained accomplishments, for example credits obtained in other master's programs or at other universities, have to be requested by the respective recognition form of the Examination Committee Master Civil Engineering (<https://www.tmb.kit.edu/english/5583.php>, *in German*). The respective lecturers confirm if the accomplishments are equivalent to their modules in the curriculum.

Accomplishments that are not equivalent to modules in the curriculum can be accredited if the acquired competences contribute to the qualification goals of the master's program. If necessary, an individual curriculum has to be compiled and approved by the mentor. The [Examination Committee Master Civil Engineering](#) decides on which accomplishments are accredited and which parts of the curriculum may be replaced.

The form for recognition has to be submitted to the [Study Advisor](#), who will transfer it to the [Examination Committee Master Civil Engineering](#) and the [Study Program Service](#) of the department ('Studiengangservice Bau-Geo-Umwelt').

For crediting passed **prior master's examinations** the form [Transfer of prior master's examinations](#) (*in German*) has to be filled and transferred to the [Study Program Service](#) of the department ('Studiengangservice Bau-Geo-Umwelt').

1.5.2 Accomplishments obtained outside of the Higher Education System

Accomplishments made outside of the higher education system, as for example vocational training, can be accredited if the acquired competences contribute to the qualification goals of the master's program. At maximum, 50 % of the university education can be replaced. For this purpose, an informal request has to be sent to the [Examination Committee Master Civil Engineering](#) and a counseling interview has to be arranged. Then, the [Examination Committee Master Civil Engineering](#) verifies to which extent the acquired knowledge and capabilities can be recognized, and which parts of the program they can replace.

1.6 Calculation of grades, final grade

Grades are obtained for single examinations. If a module contains several examinations, or a subject contains several modules, the grade of the module or subject is obtained by calculation. If not specified otherwise, the grade of the module or subject is the average of all grades within the module or subject, respectively, weighted with the corresponding credit points. The calculated grades are cut off after the first decimal place. The credit points related to not graded accomplishments are not considered within such a calculation.

The final grade is calculated by weighting the grades of all subjects and the Master's Thesis according to their defined number of credit points, as specified in the examination regulations (ER/SPO § 20). If the grade of the master's thesis is 1.0 and the final grade is 1.2 or better, the degree is awarded 'with distinction'.

1.7 Semester abroad

The department recommends students to study for one to two semesters at a foreign university. KIT offers a variety of exchange programs. Within Europe, this is the well-known ERASMUS program. General information on planning a stay abroad is available on the website of the International Student Office (IStO), <https://www.intl.kit.edu/ostudies/index.php>, and specific information is available on the website of the KIT-Department of Civil Engineering, Geo and Environmental Sciences, <https://bgu.kit.edu/english/outgoing.php>. It is compulsory to agree on the intended accomplishments with the personal mentor in advance, particularly with regard to the possibility of crediting in the personal curriculum. The proposed Learning Agreement has to be approved and signed by the [Erasmus Coordinator](#).

1.8 Special circumstances

Students in special circumstances are students with disabilities, chronic diseases, or on maternity leave, with children or dependents in need of care. The regulations on compensation for disadvantages include preferential access to courses with limited attendance, taking examinations under individually designed conditions, or adjustments to deadlines. These are described in detail in the [Satzung über nachteilsausgleichende Regelungen in den Bachelor- und Masterstudiengängen am Karlsruher Institut für Technologie \(KIT\)](#) (*in German*; see SPO § 12 and 13 according to [Satzung zur Änderung der Regelungen über den Nachteilsausgleich in den Studien- und Prüfungsordnungen, Artikel 68](#); *in German*).

For compensation for a disadvantage, the student should submit an informal application to the [Examination Committee Master Civil Engineering](#) and provide the appropriate proof. The [Examination Committee Master Civil Engineering](#) decides on the application as well as on the kind and extent of the individually necessary measures and informs the student.

3 Current changes

Major changes will be listed here as from summer term 2023. Despite the fact that this process is mapped with great care, other/minor changes may occur.

modules offered newly as from summer term 2023:

- Stormwater Management [WSEM-PA322]
- Modeling Wastewater Treatment Processes [WSEM-PA323]
- Deep Learning in Hydrological Modelling [WSEM-PC733]

changes of the courses assigned to the modules as from summer term 2023:

- Management of River and Wetland Ecosystems [WSEM-PC986]:
The course Wetlands (6111234), 2 HpW/SWS, replaces the course Ecosystem Management (6111234), 2 HpW/SWS.

T-BGU-106757	Modeling of Water and Environmental Systems	3 CR	Wienhöfer

Competence Certificate

- 'Teilleistung' T-BGU-106757 with not graded accomplishment according to § 4 Par. 3 details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students can explain approaches to model environmental systems in different water-related disciplines. Based on this, they are able to explain common approaches and methods of environmental system modeling, and to name and evaluate the respective advantages, disadvantages, ranges of applicability and inherent limitations.

Students can explain universal challenges of modeling and are able to select adequate model concepts for given water-related tasks.

Content

This lecture series comprises individual lectures on environmental systems modeling from a broad range of water-related disciplines (e.g. flood forecasting, contaminant transport, fluid-particle interaction, water quality, or hydraulic design). The commonalities and differences of the modeling approaches are discussed with respect to their conceptual approach, mathematical formulation and numerical scheme. Spatial and temporal scales as well as discretization of the various models are compared and discussed. Based on this broad range of examples, universal challenges of modeling are illustrated: Intrinsic uncertainties, adequate selection of numerical schemes, calibration and validation, adequate model choice.

Prerequisites

none

Competence Goal

Students can explain the relationships behind the occurrence of geogenic and anthropogenic compounds in the hydrological cycle. They are able to select adequate methods for the analysis of water constituents and microorganisms in water samples. They are familiar with the associated calculations, and they can compare and interpret the obtained data. They know how to apply different methods, how to analyze relationships and how to critically assess water quality analyses.

Content

Various types of water, legislations, analytical definitions, analytical quality, sampling methods, quick test methods, field investigations, organoleptic determinations, general investigations, optical characterization (turbidity, color, UV, Lambert-Beer's law, photometry), titrations, acid-base-systems, buffering, main inorganic compounds (anions, cations, occurrence, ion chromatography, titration, complexometry, flame photometry, atomic spectroscopy), heavy metals and metalloids (occurrence and main methods for determination), organic compounds and organic micropollutants (occurrence, thin layer chromatography, high performance liquid chromatography, infrared spectroscopy, gas chromatography), water-specific sum parameters (DOC, AOX, COD, BOD), radioactivity, microbiology.

Prerequisites

none

Competence Goal

Students analyze and evaluate basic methods of urban water management. They recognize the interactions between natural and technical systems. They acquire knowledge necessary to identify process engineering solutions and to implement them into functional systems (infrastructure elements). Students are able to describe urban water management issues in the context of watersheds and to take appropriate and environmentally-sound decisions in terms of energy efficiency and costs.

Content

This module provides a deep understanding of basic principles needed for the design, analysis and evaluation of urban water systems. The concept of system analysis is introduced to develop models that consider the most important biological, chemical and physical processes and are used to solve water management problems. Based on a detailed consideration of individual elements (subsystems), an overall picture of the water management system Urban Settlement and its interaction with surface and groundwater bodies can be gained. For this purpose, theoretical tools are developed and modeling approaches are reviewed. Students consider the factors energy and costs in the analysis and assessment of water management systems.

Competence Goal

Students acquire a firm understanding of the fundamental mechanics of fluids with emphasis towards environmental flows on the basis of the local conservation laws. They are able to differentiate and apply the different set of assumptions and methods in order to better understand the different flow classes and solutions. They are capable of solving basic flow problems after forming the relevant assumptions. Participants are able to use the knowledge and competence gained for more detailed and applied studies of environmental flows.

Content

This module covers the fundamental mechanics of fluids forming the foundation of environmental fluid mechanics. The approach is based on the basic local conservation laws. Emphasis is on the phenomena and the possible analytical solutions associated with the various flow classes. Topics covered include the general and special forms of the governing equations, flow kinematics, viscous incompressible flows, ideal-fluid flows, shallow flows, and buoyancy effects in fluids. Waves and turbulence are also addressed as well as different methods of analysis such as scaling.

Prerequisites

none

Competence Goal

Students are enabled to describe the fundamental approaches of numerical solution of flow problems. They are capable of evaluating the advantages and disadvantages of these approaches in the various areas of application, enabling them to make an appropriate choice. Participants are able to apply the numerical methods to simple flow problems; this involves the generation and application of basic computer programs. They are able to analyze the results with respect to precision, stability and efficiency.

Content

This module constitutes a general introduction to the numerical solution of flow-related problems. The mathematical properties of the conservation equations are analyzed. The principles of numerical discretization are studied with the aid of the finite-difference and the finite-volume method. The concept of numerical stability is introduced, and various techniques of error analysis are presented theoretically and by way of examples

- 'Teilleistung' T-BGU-106759 with written examination according to § 4 Par. 2 No. 1

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students will be able to describe and analyse basic processes linked to the hydraulics of rivers and hydraulic structures. They are able to carry the design of engineering works in rivers and the dimensioning of hydraulic structures with suitable approaches.

Based on the acquired process knowledge, they are able to analyse the results of the design in a critical manner.

Students are able to use and link their knowledge logically. They can work in a reflexive and self-critical manner.

Content

The module provides students with theoretical and practical knowledge of hydraulics applied to problem solving in the context of river engineering and for the design of hydraulic structures.

The course *River Engineering* contains the following topics:

- overview of catchment and river network basic processes and in the context of human usage and safety considering at the same time preservation of natural processes;
- sediment management; calculation and design of river engineering works such channels, riverbank protection, levees, groynes, detention basins; river restoration works.

In the course *Design of Hydraulics Structures* the following topics will be discussed in depth:

- overview: Hydraulic structures and water management and their integration in the river system
- design procedure, engineer standards and state of the art in hydraulic structures

Competence Goal

Students are able to explain the most relevant processes of Hydrology including their feedbacks and limitations. They know the concepts to describe and predict these processes in the context of science and water management. Furthermore are they able to independently apply related computer-based tools for analysis and prediction for standard situations. Students are able to evaluate the required data and to quantify and evaluate the uncertainties related to the simulations and predictions.

Content

This module deepens the fundamentals of the water and energy cycles with particular regard to:

- the soil as the central control element of the water and energy cycle and the interplay of soil water and ground heat balance
- evaporation, energy balance and processes in the atmospheric boundary layer
- runoff and evaporation regimes in different hydro-climates;
- water balance and floods at the catchment scale and statistics for water management
- the interplay between runoff processes and soil water balance, and the soil as filter system
- concepts of hydrological similarity and comparative hydrology
- process-based and conceptual models to simulate water balances and predict flood

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students get familiar with the basic principles of water ecology in surface waters. They are able to explain interactions between abiotic control factors (flow, chemistry, structure) and their relevance for the ecological status of standing waters and streams and to evaluate them critically. They become acquainted with field and laboratory techniques to establish water quality. With the help of these methods, they evaluate data-quality of information collected in the field regarding chemical, biological and structural water quality and determine the level of uncertainty intrinsic to the data-collection methods. Using case studies, students are able to convey and evaluate positive results as well as restrictions from water restoration processes.

Content

As part of the module, water ecology principles, their practical significance and implementation of restoring measures are presented. The following topics are covered:

- pollutants loads discharged into water bodies: discharge points, pollutants, sediment problems
- sampling methods
- oxygen content
- methods for the assessment of water quality and water general status
- practical exercises to measure water quality and condition in the field

Students get acquainted with practical examples of water protection and water remediation measures and they interpret and discuss them as part of an individual assignment. For this purpose, they implement their own framework, based on visible requirements and achievable targets.

Module grade calculation

grade of the module is CP weighted average of grades of the partial exams

Annotation

The number of participants in the courses is limited to 12 persons. The registration is to be made via ILIAS. The places are allocated considering the progress in the students' studies, with priority to students from *Water Science and Engineering*, then *Civil Engineering* and *Geoecology* and further study programs. The attendance at the first meeting is mandatory. In case of absence the place will be assigned to a person on the waiting list.

Competence Goal

Students relate the hydrodynamics theory and physical concepts to the observed physical reality. They apply their knowledge and skills for the comparative analysis of basic flow situations in physical models, using appropriate measurement technologies. They assess and evaluate the results and limitations by comparing their results with theoretical deductions. They extend their results of phenomena-oriented experiments with regard to practical applications in technical hydraulics and environmental flows. Acquired competence: operation of test facilities and instrumentation, data analysis and basic statistical error analysis, team work, written and oral communication.

Content

Lecture:

- typical set-up of hydraulic and aerodynamic models
- dimensional analysis, dimensionless parameters
- measurement instrumentation
- introduction to statistical error analysis
- analogy numerical/physical modeling, model distortion
- technical writing and oral presentation

Physical experiments:

- pipe flow with orifice plate
- open channel flow with gates and hydraulic jumps
- Venturi pipe flow with cavitation- Settling velocities of spheres
- diffusion of a turbulent air jet
- turbulent wake
- dam leakage

Competence Certificate

- 'Teilleistung' T-BGU-106765 with not graded accomplishment according to § 4 Par. 3

details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students are familiar with common programming rules and the working environment and basic syntax of Matlab. They are capable of independently formulating and coding simple programs for data analysis and visualization as well as simulation of dynamical systems with Matlab. Students have thus gained the competence to independently solve computer-based modeling tasks in advanced courses. Students are able to solve problems and to present the related results in teamwork.

Content

- universal programming basics: Programing strategies, program structures, control structures, operators and variables, functions and objects, matrix calculations
- basics of Matlab: History, installation, graphical user interface, tool boxes, using help
- Matlab programming basics: syntax, debugging, reading and writing of files, data visualization

Take-home programming assignments:

- programs to analyze and visualize observation data
- design and implementation of a simple dynamical model
- preparation of ungraded assignments and presentation in small groups

Module grade calculation

not graded

Annotation

The course is limited to 60 participants. Please register via the student portal (Studierendenportal). Only in case that this should not be possible: Please register via e-mail to the responsible lecturer. Participants are selected according to their progress of study considering the following order: students of Water Science and Engineering, then students of Civil Engineering with focus 'Water and Environment', then other students.

Workload

contact hours (1 HpW = 1 h x 15 weeks):

- lecture/exercise: 30 h

independent study:

Mandatory			
T-BGU-106605	Geostatistics	6 CR	Zehe

Competence Certificate

- 'Teilleistung' T-BGU-106605 with oral examination according to § 4 Par. 2 No. 2

details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students can explain and apply methods for analysis and simulation of spatially and temporally distributed environmental data. Based on this, they are capable of setting up experimental designs for environmental monitoring and evaluate the suitability of available data for different tasks. Students are able to critically assess the results of analysis and simulation tools and to quantify and evaluate the related uncertainties.

Content

- fundamentals of environmental systems theory, environmental monitoring and experimental design (data types, scale triplet, measuring methods)
- experimental variograms, directional variograms, indicator variograms, variogram fitting, anisotropy
- Kriging techniques: Ordinary Kriging, screening properties of Kriging, BLUE, pure nugget effect, cross validation, RMSE
- estimation of spatial patterns in nonstationary data (External Drift Kriging, Simple Updating)
- simulation of spatial patterns: turning Bands Simulation, smoothing problems of interpolation

- 'Teilleistung' T-BGU-106764 with written examination according to § 4 Par. 2 No. 1

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students are able to rank interdisciplinary texts on development planning according to their relevance, and formulate relevant questions on this topic. Students can research systematically on a scientific problem, and they can use different technical terms. They are able to put the materials in the context of integrated development planning and current water resources problems to work on solutions for adapting to regional conditions.

Content

Socio-economic aspects:

- natural resources as economic goods
- scenario analysis of depletion and capacity of natural resources, assessment of values, additional costs
- coordination of activities on economic development; strategical planning, indicator systems
- cost-benefit analyses, investment criteria

Ecological aspects / environmental impact assessment:

- biodiversity, habitats, resilience, structure and dynamics of ecosystems; nutrient cycling
- bioindicators, ecosystem services
- history of environmental impact assessment (EIA), EIA in the EU, in other countries
- impact assessment in the EW -proj e ct management (mitigation, compensation, monitoring, auditing)

Competence Goal

- Students acquire basic knowledge of probability theory, and are able to model simple random phenomena
- they know the basic differences between descriptive and inferential statistics
- Students learn basic statistical methods, and are able to apply this knowledge to new examples

Content

The lecture gives a concise introduction to probability theory and covers some important statistical methods.

Key terms: random experiments, events, probability, conditional probability, independent events, random variables, probability distribution, density, sample mean, sample variance, sample correlation, point estimate, confidence interval, test, error propagation, linear regression.

- 'Teilleistung' T-BGU-106837 with oral examination according to § 4 Par. 2 No. 2

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students are familiar with the important methods of modern instrumental analysis and their range of application. They can explain the basic physical principles of the methods. Students are able to develop solutions for analytical problems, to choose adequate procedures for sample preparation and measuring techniques. They can evaluate the measurement data and interpret the results.

Content**Instrumental Analysis:**

Introduction to selected methods of modern instrumental analysis:

- Optical methods
- Magnetic resonance methods, mass spectrometry
- Imaging methods as MRT, μ CT and optical methods (CLSM and OCT)
- Basics of data analysis and image processing

Organic Trace Analysis of Aqueous Samples:

Laboratory course on methods for sample concentration, sample preparation, and analysis of organic trace compounds in aqueous samples using HPLC coupled with tandem mass spectrometry (LCMSMS)

To participate in the lab course, please make an appointment with Dr. Brenner-Weiß (IFG).

T-BGU-106843	Remote Sensing and Positioning	4 CR	Mayer, Sumaya, Weidner

Competence Certificate

- 'Teilleistung' T-BGU-106843 with oral examination according to § 4 Par. 2 No. 2
- 'Teilleistung' T-BGU-101759 with not graded accomplishment according to § 4 Par. 3 as examination prerequisite
- 'Teilleistung' T-BGU-109329 with not graded accomplishment according to § 4 Par. 3 as examination prerequisite

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Positioning (Fundamentals of Environmental Geodesy Part B):

The students know the basic concepts of GNSS positioning and are able to familiarize themselves with new GNSS-related topics. The students work autonomous and self-organized in the field of geodesy and have communicative as well as organizational competences with respect to collaboration, presentation and discussion.

Remote Sensing:

Students are able to explain the fundamentals of multispectral remote sensing, namely the basics of pixel- and segment-based classification approaches, their communalities and their differences. Students are able to use their knowledge and transfer it to other fields of applications.

Content

Positioning (Fundamentals of Environmental Geodesy Part B):

- Contributions of Geodesy to Water Science
- GNSS positioning: Segments, signals, code and phase measurements, error sources and error reduction, processing strategies, differential and absolute positioning, real-time/post-processing, RTK and static mode, Precise Point Positioning, services
- Height concepts, vertical reference frames
- GNSS levelling

Remote Sensing:

- This module provides an overview of multispectral remote sensing. It introduces to concepts of data processing, also including sensor aspects where required. Based on a selection of applications like land cover/used classification and change detection / monitoring approaches are presented and compared. The module consists of lectures and labs.

Module grade calculation

grade of the module is grade of the exam

Workload

Competence Certificate

One or more learning controls, depending in th selected module, can be taken in form of a written test. These can be graded or not graded.

Attendance of classes is compulsory. Further information is provided by Sprachenzentrum (www.spz.kit.edu), Studienkolleg für ausländische Studierende (www.stk.kit.edu).

The learning controls can be taken graded or not graded. The registration is done directly at the 'Sprachenzentrum' (www.spz.kit.edu) or 'Studienkolleg für ausländische Studierende' (www.stk.kit.edu) but not online. For crediting after passing the course please contact the Study Program Service ('Studiengangservice Bau Geo Umwelt', <https://www.bgu.kit.edu/studiengangservice.php>).

Prerequisites

Only one module can be selected. This module must not be selected together with one of the modules

M-BGU-103468 - Language Skills 2 (3 CP)

M-BGU-103469 - Language Skills 3 (4 CP)

M-BGU-103470 - Language Skills 4 (5 CP)

M-BGU-103471 - Language Skills 5 (6 CP)

The same is valid for the other modules.

Language courses in the native language of the student are not accredited.

English language courses below or at the level required for admission to the master's degree program Water Science & Engineering are not accredited. By this, courses with the GER level C1 or higher can be selected. Independent of this, courses regarding writing and presentation skills can be selected ('Scientific Writing', 'Writing Skills', 'Effective Presentations').

Competence Goal

Students acquire skills in cross-cultural communication.

Content

Students can acquire and improve knowledge of a language of their choice. Information on the courses offered and on the registration procedure are given at: www.spz.kit.edu.

Students who are not native German speakers may attend German courses at Studienkolleg: www.stk.kit.edu/deutsch_kurse.php.

Module grade calculation

not graded

Annotation

Language Skills can be taken in extent of 2 - 6 CPs. For the desired amount of CPs the respective module has to be selected. The Module Handbook provides exemplarily the description for the module 'M-BGU-103466 - Language Skills 1 (2 CP)'.

The module can only be selcted within the subject 'Cross-Cutting Methods and Competencies' or accredited as additional accomplishment.

Workload

corresponding to the selected language course/s

Prerequisites

none

Competence Goal

Students learn fundamental knowledge in water chemistry and how to apply it to processes in aquatic systems in general and in reactors for water treatment. Water treatment will be taught for drinking water and partly waste water. The students are able to apply physical, chemical and biochemical treatment for the respective removal of particulate and dissolved components in water. They are able to use the fundamental design parameters for the different types of unit operations.

Content

Water cycle, different types of raw water (ground and surface water). Water as solvent, carbonate balance, differentiation between microbiological and chemical population. Unit operations: sieving, sedimentation, filtration, flocculation, flotation, ion exchange, aeration, oxidation, disinfection, adsorption). For all unit operations design parameters will be provided. Simple 1D models will be discussed for description of kinetics and retention time in reactors for water treatment.

Prerequisites

none

Competence Goal

Students have a fundamental knowledge on membrane technology in water and waste water treatment. They learn how the different membrane systems (reverse osmosis, nanofiltration, ultrafiltration, microfiltration, and dialysis) have to be applied to produce a certain water quality. They are able to design such systems.

Content

- The solution-diffusion model
- Concentration polarization and the consequences for membrane module design.
- Membrane production and properties.
- Membrane configuration and design
- Membrane systems for desalination and brackish water treatment
- Membrane bio reactors for waste water treatment
- Biofouling, scaling and prevention of both
- Excursions with introduction: applied membrane processes in waste water disposal and drinking water supply.

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

The module "Water Technology (WSEM-PA221)" has to be begun, i.e. at least the registration has to be made.

Modeled Conditions

The following conditions have to be fulfilled:

1. The module [M-CIWVT-103407 - Water Technology](#) must have been started.

Competence Goal

Students can explain the most important processes in water treatment. They are able to do calculations, and to compare and interpret data. They learn how to use different methods, and to interpret different processes.

Content

6 different experiments out of: equilibrium study of the calcium carbonate system, flocculation, adsorption, oxidation, atomic absorption spectroscopy, ion chromatography, liquid chromatography, sum parameter, and an oral presentation of the student. In addition, excursions to two different treatment plants (waste water, drinking water).

Module grade calculation

grade of the module is the grade of the exam

Workload

contact hours (1 HpW = 1 h x 15 weeks):

Prerequisites

none

Competence Goal

Students can describe the structure and function of biofilms in natural habitats as well as in technical systems. They can explain the major influencing factors and processes for the formation of biofilms. They are familiar with techniques for visualizing biofilm structures as well as with models for simulating biofilm growth. They are able to select appropriate methods for the analysis of biofilms and to evaluate the habitat conditions.

Content

Microorganisms typically organize in the form of biofilms in technical and natural aquatic systems. However, biofilms are not only accumulated microorganisms at interfaces: They are bound together by a matrix of extracellular polymeric substances (EPS). In this course, the structure and function of biofilms in different natural habitats and technical applications (biofilm reactors, biofilms in natural waters, biofouling in technical systems and biofilms for power generation in microbial fuel cells) are presented and discussed. Biofilm growth and abrasion as well as models for the simulation of these processes are introduced. Furthermore, microscopic techniques for the visualization of biofilm structures are presented.

Competence Goal

The students will be able to differentiate the composition of different types of industrial wastewater. Moreover, the students will have knowledge of treatment technologies, which can be applied to industrial wastewater. The students will be able to judge the biodegradability of industrial wastewater and can use that to design the needed treatment trains. The students do know treatment steps, which can be used enhance reuse the treated wastewater.

Content

This module provides the huge range of industrial wastewater composition for different industries (food, pulp and paper, chemical and pharmaceutical industry). The biodegradability will be analyzed and discussed with respect to potential treatment systems. A main focus will be biological treatment systems, especially biofilm reactors. Finally, the potential of water reuse in industrial processes will be discussed and solution will be provided.

Prerequisites

none

Competence Goal

Students acquire knowledge about typical techniques and facilities in wastewater treatment at local and international level. They are able to perform a technical evaluation and describe dimensioning approaches taking into consideration legal boundary conditions. Students analyze, evaluate and optimize operation of plant technologies. They focus on energy-efficient plant designs considering the most relevant factors affecting the total costs. Students can analyze the situation in emerging and developing countries making a comparison with that in industrialized countries. Based on that, they are able to develop water-related management strategies.

Content

Students gain deep knowledge about design and operation of typical process technologies in municipal wastewater treatment in Germany and abroad. They analyze, evaluate the applied technologies and take decisions when new and more holistic oriented methods can be implemented. Different mechanical, biological and chemical treatment technologies are considered, whereby the treatment of waste water from households and industry as well as the treatment of rainwater is discussed. The visit of at least one municipal wastewater treatment plant in Germany completes the course. The course includes lab work in groups to learn about basic measuring and analytical procedures in wastewater treatment plants.

Module grade calculation

grade of the module is grade of the exam

Annotation

The course takes place in winter term as from now.

The number of participants in the course is limited to 30 persons. The registration is to be made via ILIAS. The places are allocated considering the progress in the students' studies, with priority to students from *Water Science and Engineering*, then *Civil Engineering*, *Chemical and Process Engineering*, *Geoecology* and further study programs.

Workload

contact hours (1 HpW = 1 h x 15 weeks):

Prerequisites

none

Competence Goal

Students will learn about principles, operations, and simulation of separate and combined sewer systems. Students get familiar with technical plants for stormwater treatment. They can explain operating principles of individual system components as well as assess their suitability for specific applications and apply basic dimensioning approaches.

Content

Lectures are followed by several guided site visits, descriptions, and evaluations of different stormwater treatment plants: stormwater sedimentation tanks, stormwater overflow tanks, and retention soil filters. Settlement characteristics and dimensioning approaches for the design of stormwater treatment facilities will be discussed and evaluated during the site visits. The course wraps up with group laboratory work to learn measurements for sedimentation column and sedimentation basin experiments to evaluate sedimentation characteristics and conduct relevant measurements.

Module grade calculation

grade of the module is grade of the exam

Annotation

Module will be offered newly as from summer term 2023.

The attendance of the site visits and the lab work is mandatory.

The number of participants in the course is limited to 20 persons. The registration is made via ILIAS. The places are allocated considering the progress in the students' studies, with priority to students from *Water Science and Engineering*, then *Civil Engineering*, *Geoecology* and further study programs.

Prerequisites

none

Competence Goal

The students will be able to learn the basics of wastewater treatment modeling to develop a matrix for a biological model. Another objective is being able to work with several relevant computer software as tools for modeling wastewater treatment processes and running sensitivity analysis, calibration, and validation. At the end of this course, the students will be able to apply the theory concerning modeling practice in case studies with real datasets using one of the relevant software they learned. During the presentation, they will discuss and explain the outcome of the model.

Content

The course deals with the basis of wastewater modeling (kinetics, stoichiometry, mass balances, hydraulics, mixing, and matrix notation), an introduction of existing activated sludge models (ASM1, ASM2, ASM3, ASM2d), and a selection of computer programs (AQUASIM, SIMBA, GPS-X, and SUMO) in which the models can be built in and the protocol for the development of calibrated activated sludge models will be practiced. Different adjustments to basic ASM models for characterization of biofilm and granular sludge model, as well as anaerobic digestion models (ADM), will be also discussed. Besides the presentations, exercises form a part of the course. Finally, case studies with real datasets on modeling wastewater treatment plants will be practiced.

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students will have profound knowledge of the components and operational requirements of water supply systems. They are enabled to plan, design and optimize water distribution systems. They are capable to critically analyze concepts and designs based on their knowledge. Participants are able to set up and apply numerical models of water distribution systems for planning and analysis. Students have competences in work organization, presentation and discussion of results.

Content

The module covers the following topics:

- fundamentals of water distribution
- fundamentals of water distribution system modeling
- introduction to the software Epanet (water distribution system model) and ArcGIS (geographic information system)
- water demand
- water losses
- calibrating a water distribution system model
- designing pipe networks, storage tanks and pump stations
- application of the technical standards (DVGW)

The participants apply the theoretical knowledge to analyze and design an exemplary water distribution network.

Prerequisites

none

Competence Goal

Students can explain the microbiological principles and their technical applications. Students are able to apply technically relevant biochemical and molecular biology issues to ecological, biotechnical and environmental processes. They can analyze and evaluate factors limiting operations in e.g. biotechnology and water technology and can combine processes for enhanced turnover rates in the sense of ecology and/or economy.

Content

Main issues are the structures and functions of microorganisms, their interactions with global element cycles and other organisms, the microbial impact on energy and corrosion as well as strategies against microbes. Basing on the fundamental metabolism biotechnology operations and specific monitoring strategies are presented.

Module grade calculation

grade of the module is CP weighted average of grades of the partial exams

Competence Certificate

- 'Teilleistung' T-BGU-106767 with written examination according to § 4 Par. 2 No. 1
 details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students identify fundamental hydrodynamic processes in the natural environment in water and air applications and solve related problems. They can relate the observed phenomena to fundamental principles of hydrodynamics and to the specific nature of the flow conditions. They can critically evaluate the different models and approximations made to obtain solutions and predictions and can make first estimates.

Content

This module covers the fundamental concepts and flow models of environmental fluid mechanics in both water and air. The topics include turbulence structure in rivers and open channels, diffusion and dispersion, atmospheric boundary layers, internal waves, instabilities and mixing, stratified turbulence, buoyant jets and plumes.

Module grade calculation

grade of the module is grade of the exam

Annotation

- 'Teilleistung' T-BGU-106769 with oral examination according to § 4 Par. 2 No. 2

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

module 'Numerical Fluid Mechanics (AF501)' must be completed

Modeled Conditions

The following conditions have to be fulfilled:

1. The module [M-BGU-103375 - Numerical Fluid Mechanics](#) must have been passed.

Competence Goal

Students are able to numerically solve simplified flow problems based upon the Navier-Stokes equations in an independent fashion. This involves the design of a solution method, the analysis of its properties (concerning stability, precision, computational effort), the algorithmic implementation, the validation with respect to appropriate test cases, and the final documentation of the results. Furthermore, participants of this course are enabled to judge techniques for the use of massively parallel computer systems to solve fluid mechanics problems as to their efficiency and applicability. They are capable of applying the appropriate parallel programming techniques to selected model problems.

Content

In the present module, advanced skills in the numerical solution of fluid mechanics problems are imparted, building upon the material of the course Numerical Fluid Mechanics I. Here, various numerical solution methods for the time-dependent Navier-Stokes equations in several spatial dimensions are demonstrated with the aid of practical examples. This includes the following aspects: coupling and decoupling of velocity and pressure fields in incompressible flows, numerical treatment of discontinuities (shock waves, hydraulic jumps), computation of scalar transport, numerical tracking of inertial particles, linear stability analysis.

The course Parallel Programming Techniques for Engineering Problems conveys the fundamental programming concepts for massively-parallel computer systems. First, the common parallel computer architectures and the most widely used programming paradigms are introduced. Then techniques for implementing standard algorithms of numerical fluid mechanics (and other disciplines involving field problems) are presented, analyzed and practiced with the aid of the Message Passing Interface (MPI) standard.

Competence Certificate

- 'Teilleistung' T-BGU-110841 with oral examination according to § 4 Par. 2 No. 2

details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Participants are able to describe the characteristics of turbulent flows, and to quantify their effect upon the transport rates of momentum, heat and mass. They are aware of the problems associated with computationally determining turbulent flow quantities. With this knowledge, they are able to weigh the pros and cons of the different modeling approaches; they are further able to choose an appropriate approach for a given application.

Content

The mathematical description of the physics of turbulence is successively developed. The module presents the phenomenology of turbulent flows, introduces the statistical description of turbulent flow processes, discusses the characteristics of free and wall-bounded shear flows, and presents an analysis of the turbulent energy cascade.

Module grade calculation

grade of the module is grade of the exam

Annotation

Prerequisites

none

Competence Goal

Participants are able to weigh the pros and cons of the different modeling approaches; they are further able to choose an appropriate approach for a given application. Participants have the ability to critically evaluate the expected outcome of a range of turbulence models with respect to their predictive capabilities and the required computational effort.

Content

In this module covers the required mathematical tools and the most useful modeling approaches for fluids engineering problems. First the statistical approach to turbulence modeling, based upon Reynolds averaging (RANS) is presented, starting with the simplest algebraic model and ranging up to Reynolds stress transport models. Furthermore, an introduction to the concept of large-eddy simulation (LES) is given.

 - 'Teilleistung' T-BGU-110404 with written examination according to § 4 Par. 2 No. 1
- details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students are able to analyze and calculate steady and unsteady flow forces on hydraulic structures. They can describe groundwater flow processes and derive flow parameters with common measurement calculations. Based on the acquired knowledge, they can analyze concepts for preventing groundwater-related structural damage in a critical manner. Students characterize and categorize flow-induced structural vibrations. They can apply their knowledge to application examples.

Content

In this module, the following topics are discussed in depth:

- potential theory
- groundwater flow
- structural adjustment to groundwater flow
- determination of hydrostatic and hydrodynamic flow forces
- overview of sealing mechanisms: flood sluices, weirs, gates
- flow-induced structural vibrations

Prerequisites

This module must not be selected together with the module Flow and Sediment Dynamics in Rivers [WSEM-PB633] not offered anymore.

Competence Goal

The module provides students with theoretical and practical knowledge of landscape and river processes, related to hydromorphodynamics and transported phases. The students will be able to transfer immature scientific knowledge into engineering praxis.

After successfully completing the course on *Landscape and River Morphology*, the student will be able to:

- describe the main morphology processes happening at the landscape and river scale,
- describe and identify the governing processes of singularities in the river networks such as confluences, bifurcations, bends, among others,
- identify possible implications of climate change in morphological processes of the river basin,
- identify the main hydromorphodynamic processes relevant to river ecology,
- transfer immature knowledge from scientific literature into engineering praxis.

After successfully completing the course on *Transport Processes in Rivers*, the student will be able to:

- describe the engineering and ecological implications of different types of moving elements (debris) in rivers,
- identify relevant sources and sinks of debris transported by rivers,
- quantify transport processes relative to river debris,
- plan monitoring campaigns based on state-of-the-art techniques.

Transfer scientific literature in river debris into practical applications.

Content

The course *Landscape and River Morphology* contains the following topics:

- morphology processes at the landscape scale
- morphology processes at the river scale
- intersection of hydromorphodynamic processes with engineering praxis
- safety and stability of river networks
- fluvial ecomorphology

The course *Transport Processes in Rivers* studies the sources, transport and transformations, and sinks of different types of elements:

- sediment transport (bed and suspended load)
- woody and vegetation debris
- plastic and urban (cars and urban furniture) debris
- bubbles and gas transfer
- contaminant plumes

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

The module must not be selected together with the module Experimental Hydraulics and Measuring Techniques (WSEM-PB641) not offered anymore.

Competence Goal

Students are able to describe the principles of different flow measurement methods and combine this information with the basics of today's flow measurement technology. They have basic knowledge about the structure and can analyze the suitability of measurement methods and set application boundaries. Students have basic knowledge about experimentation in hydraulics. They know the similarity mechanical requirements and assign them to the hydromechanical basics. Students are able to analyze applications in the field of multiphase hydraulics and select suitable model concepts. They can present their own thoughts and ideas in a structured manner and discuss the themes with specialists.

Content

In this module, the following topics will be discussed in depth:

- basic equations in fluid mechanics
- measurement methods and their fields of application
- experimental models with movable beds
- experiments related to multiphase flow problems (water-air, water-solid)

Competence Goal

Students are able to describe the different turbine types and can define selection criteria for their usage. They are able to reproduce the basic approaches in the planning and design of hydropower plants and to make own calculations to select turbines. They can select and apply the necessary tools in a methodical matter.
 Students are able to discuss the current political conditions in terms of energy policy with other students and support their personal opinion on these issues with technical arguments.

Content

The course explains the technical background for planning and designing waterpower plants. Among others, it covers the constructional characteristics of river and high-pressure power plants, the operating modes and selection criteria of different types of turbines as well as electro-technical aspects of the plants' operation. In addition, ecological aspects and energy policy are considered as frame conditions. The lecture sessions are complemented by the presentation of current projects and excursions.

Prerequisites

none

Competence Goal

Students are able to explain the basic relationships between water-driven material cycles in river basins and their budget in aquatic ecosystems. They are able to analyze the impact of anthropogenic activities on water condition and quality. Students gain knowledge regarding transport pathways of substances and biochemical and physical interactions in water bodies in order to formulate mathematical model approaches. Using simulation models, they are able to quantify substance emissions; to predict the impact from external influences on the water quality relevant processes and; to perform different scenario analysis. Students are capable of evaluating model results in terms of their plausibility and uncertainty.

Content

This module provides students with a broad-based understanding of the fundamentals of materials flows (N, P, pollutants) and their relevant transport pathways in river basins. Different modeling approaches for a quantitative description of the processes will be presented. Students receive a single-user version of the simulation tool MoRE (Modeling of Regionalized Emissions). They have to develop and implement their own model in small groups and interpret simulation results.

T-BGU-100625	Numerical Groundwater Modeling	3 CR	Mohrlök

Competence Certificate

- 'Teilleistung' T-BGU-100624 with oral examination according to § 4 Par. 2 No. 2
 - 'Teilleistung' T-BGU-100625 with examination of other type according to § 4 Par. 2 No. 3
- details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Based on the understanding of hydrogeological settings and fluid-mechanical processes in the subsurface students can characterize different kinds of groundwater systems by means of hydraulics. They can quantify the relevant flow and transport processes with simple analytical and numerical methods for different problems regarding groundwater quantity and quality. Thereby, they are able to conceive and evaluate the relations important for the management of groundwater resources.

Content

- groundwater systems
- fluid-mechanical processes in porous media
- methods of balancing groundwater flow and solute transport processes
- examples of groundwater management
- project work

Module grade calculation

grade of the module is CP weighted average of grades of the partial exams

Annotation

none

Workload

contact hours (1 HpW = 1 h x 15 weeks):

- Groundwater Hydraulics lecture/exercise: 30 h
- Numerical Groundwater Modeling presentations/project discussions: 15 h

independent study:

- preparation and follow-up lecture/exercises, working on exercises Groundwater Hydraulics: 40 h
- examination preparation Groundwater Hydraulics (partial exam): 20 h
- project work Numerical Groundwater Modeling, incl. presentation and preparation of the report (partial exam): 80 h

total: 185 h

Recommendation

basic knowledge in fluid mechanics, hydrology, solute transport and numerical methods

Competence Certificate

- 'Teilleistung' T-BGU-111275 with written examination of other type according to § 4 Par. 2 No. 3
details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students are able to independently undergo the basic steps of planning and design in water resources management. They can identify engineering problems and apply the respective design approaches.

Students are able to work in a self-organized and reflexive manner. They are able to use and link their knowledge logically and have organizational skills in the areas of teamwork and presentation.

Content

In this module, students will work in teams to independently plan and design a flood protection measure for a small catchment. This comprises:

- identifying the legally required flood protection level
- establishing and comparing possible flood protection strategies
- setting up a hydrological model for the project catchment
- establishing hydrological design values based on design storms applied to the hydrological model, and designing flood values from extreme value statistics
- designing the outlet works and the flood release system of a flood retention basin based on the hydrological flood values with a special focus in capacity and energy dissipation.

In the lectures, the following topics required to successfully accomplish the design project will be covered:

- basic introduction to Water Resources Management
- basic planning methodology in water management projects
- basic hydrological modeling
- introduction to extreme-value statistics and design storms
- introduction to the related design standards and legal requirements (DIN 19700 and others)
- introduction to the design of hydraulic structures with a special focus on flood retention basins
- principals of Computer Aided Design (AutoCAD)
- background on operation and maintenance of flood retention basins
- practical example: excursion to a build flood retention basin

Module grade calculation

grade of the module is grade of the exam

Annotation

Mandatory			
T-BGU-106598	Transport and Transformation of Contaminants in Hydrological Systems	6 CR	Zehe

Competence Certificate

- 'Teilleistung' T-BGU-106598 with oral examination according to § 4 Par. 2 No. 2
 details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students are able to explain processes of transport and decomposition related to nutrients and pollutants in surface runoff and in the unsaturated zone of rural catchments.

Students are able to independently apply analytical and process-based models: estimation of model parameters from field investigations, estimation of water and substance fluxes and balance in the critical zone, statements on the risks related to contaminant mobilization in natural soils.

Students are able to evaluate the limits of applicability of modeling approaches in natural, heterogeneous soils.

Content

Transport processes in the unsaturated zone related to infiltration, surface runoff, and movement of soil water:

- advective-dispersive transport in homogeneous and heterogeneous soils
- particulate transport by erosion
- adsorption
- chemical and microbial processes of reaction and decay in soils
- modeling contaminant transport (e.g. pesticides) in soils using analytical models
- risk assessment for pesticides in soils (transport, residence times, adsorption, decay)
- estimation of model parameters from field exploration
- parameterization of adsorption isotherms
- breakthrough curve

Computer exercise:

- simulation of water and substance transport with process-based models
- independently conducted risk-assessments for pesticides using simple simulation techniques

Module grade calculation

grade of the module is grade of the exam

Annotation

none

Workload

contact hours (1 HpW = 1 h x 15 weeks):

Competence Certificate

- 'Teilleistung' T-BGU-106599 with examination of other type according to § 4 Par. 2 No. 3 details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students know and understand measurement principles for catchment properties, catchment states, and water fluxes. They are able to independently plan and conduct measurements on various scales (soil column, plot, hillslope, catchment) in the field and the laboratory. Students can analyze observation data with statistical methods, and are able to quantify and evaluate the related uncertainties. Students are able to present the related results in teamwork.

Content

- introduction to environmental observations (scales, uncertainties), statistical data analysis and error analysis
- seminar on hydrological measurement devices in field and laboratory: Discharge, soil moisture, infiltration, hydraulic conductivity
- lab and field work (several days) where students conduct hydrological measurements

Module grade calculation

grade of the module is grade of the exam

Annotation

The course requires a minimum number of 6 and a maximum number of 30 participants. Please register online for the course (not exam!), 6224807, via the Campus portal (in exceptional cases via e-mail to the responsible lecturer). Participants are selected according to their progress of study considering the following order: students of *Water Science and Engineering*, students of *Civil Engineering*, students of *Geoecology*.

Workload

contact hours (1 HpW = 1 h x 15 weeks):

- laboratory and field exercise: 70 h

independent study:

- preparation and follow-up laboratory and field exercises: 10 h
- preparation of presentations and reports (exam): 100 h

total: 180 h

Recommendation

6	Grade to a tenth	Each summer term	1 term	English	4	1

Mandatory			
T-BGU-112171	Deep Learning in Hydrological Modeling	6 CR	Loritz

Competence Certificate

- 'Teilleistung' T-BGU-112171 with examination of other type according to § 4 Par. 2 No. 3 details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

The students have gained a general understanding how machine learning methods, particular artificial neural networks and derivatives, are applied in hydrology and have an overview of the current research in this field. They are able to independently setup different types of artificial neural networks in Python and do understand the core principles of these approaches. This includes that they are able to analyze these neural networks and understand their key limitations. The overall goal is that they are prepared to apply state of the art machine learning methods in the water sciences.

Content

This module is designed to deepen the understanding how machine learning is applied in hydrology. This is done along hands-on examples in combination with state of the art machine learning literature. The content is designed to strengthen the programming and scientific skills of the participating students. Topics of the class are:

- machine learning models as surrogate of environmental models with a focus on hydrological modeling
- basic concepts behind artificial neural networks and derivatives
- promises and key limitations of artificial neural network
- hybrid modelling: ideas, concepts and state of the art
- how to setup, design and validate artificial neural networks with hands-on examples in Python
- how to present scientific results in presentations and in a written form

Module grade calculation

grade of the module is grade of the exam

Annotation

Module will be offered newly as from summer term 2023.

The course is limited to 12 participants. Please register via e-mail to the responsible lecturer. Participants are selected according to their progress of study considering the following order: students of *Water Science and Engineering*, that have successful participated in 'Introduction to Environmental Data Analysis and Statistical Learning' and 'Water and Energy Cycles', then students of *Civil Engineering* with focus Water and Environment, then other students.

Workload

contact hours (1 HpW = 1 h x 15 weeks):

- lecture/exercise: 60 h

independent study:

- preparation and follow-up lecture/exercises: 20 h
- preparation of presentation : 40 h
- preparation of report: 60 h

total: 180 h

Recommendation

sound knowledge in basics of hydrology;

interest in reading and reviewing scientific research papers;

good programming skills in Python, MatLab or R, preferably in Python.

successful participation in Introduction to Environmental Data Analysis and Statistical Learning (WSEM-CC774) and Water and Energy Cycles (WSEM-AF701)

M

4.52 Module: Protection and Use of Riverine Systems (WSEM-PC762) [M-BGU-103401]

Responsible: Dr. rer. nat. Charlotte Kämpf
Organisation: KIT Department of Civil Engineering, Geo and Environmental Sciences
Part of: [Profile Studies / Water Technologies & Urban Water Cycle \(Supplementary Modules\)](#)
[Profile Studies / Fluid Mechanics & Hydraulic Engineering \(Supplementary Modules\)](#)
[Profile Studies / Environmental System Dynamics & Management \(Profile Modules\)](#)
[Profile Studies / Water Resources Engineering \(Compulsory Modules C\)](#)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
6	Grade to a tenth	Each summer term	1 term	English	4	1

Mandatory			
T-BGU-106790	Prerequisite Protection and Use of Riverine Systems	1 CR	Kämpf
T-BGU-106791	Protection and Use of Riverine Systems	5 CR	Kämpf

Competence Certificate

- 'Teilleistung' T-BGU-106790 with not graded accomplishment according to § 4 Par. 3 as examination prerequisite
- 'Teilleistung' T-BGU-106791 with examination of other type according to § 4 Par. 2 No. 3

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

Students are able to rank interdisciplinary texts on riverine systems according to their relevance, and formulate relevant questions on this topic. Students can research systematically on a scientific problem. They are able to put the materials in the context of integrated management strategies and current water resources problems to work on solutions for adapting to regional conditions.

Content

Integrated Water Management:

- planning of water management projects
- adapted technologies (small hydropower systems)
- water distribution networks
- consideration of the geographical, social and political environment

International Nature Conservation:

- FFH Directive, Natura 2000, wildlife conservation concepts
- renaturation concepts

- 'Teilleistung' T-BGU-110413 with not graded accomplishment according to § 4 Par. 3
- 'Teilleistung' T-BGU-111592 with written examination according to § 4 Par. 2 No. 1

details about the learning controls see at the respective 'Teilleistung'

Prerequisites

none

Competence Goal

- The students are able to understand and explain the hydrogeological characteristics of karst aquifer systems and recognize them in the field.
- They are familiar with the relevant investigation methods in karst hydrogeology for scientific research and professional practice.
- They can evaluate the vulnerability of karst groundwater resources and develop concepts for their sustainable management.

Content

- Geomorphology and hydrology of karst landscapes
- Mineralogy, stratigraphy and geologic structure of karst systems
- The carbonate equilibrium, calcite dissolution, karstification and speleogenesis
- Groundwater flow in karst aquifers
- Modeling approaches in karst hydrogeology
- Vulnerability and contaminant transport in karst
- Springs, wells and other drinking water abstraction structures in karst aquifers
- Field exercises in karst hydrogeology: Impact of climate change on karst groundwater resources, drinking water abstraction in karst areas

Module grade calculation

grade of module is grade of the exam

Annotation

The practical part of this course is carried out in presence. The field courses are essential for the progress of the participants.

30	Grade to a tenth	Each term	1 term	German/English	5	1

Mandatory			
T-BGU-110134	Master's Thesis	30 CR	Studiendekan:in der KIT-Fakultät für Bauingenieur-, Geo- und Umweltwissenschaften

Competence Certificate

thesis and final presentation according to § 14 ER/SPO

Prerequisites

Prerequisite for the admission to the Master Thesis is that the student has passed module examinations in the extent of minimum 42 CP. The examination board decides about exceptions on request of the student (ER/SPO § 14 Par. 1).

Competence Goal

The student is able to investigate independently a complex problem within a particular research field of his choice in limited time, following scientific methods. He can search autonomously for literature, can find own approaches, can evaluate his results and can classify them according to the state of the art. He is further able to present clearly the essential matter and results in his master thesis and in a comprehensive presentation.

Content

The Master Thesis is an independent written report and comprises the theoretical or experimental work on a complex problem within a particular field of civil engineering with scientific methods. The topic of the master thesis derives from the students choice of a particular field. The student and can make proposals for the topic.

Module grade calculation

The grade of the module results from the evaluation of the Master Thesis and the final presentation.

Annotation

Information about the procedure regarding admission and registration of the Master Thesis see chap. [1.2.5](#).

Workload

- working on thesis project: 720 h
- thesis writing: 150 h.
- preparation of presentation: 30 h

total: 900 h

Recommendation

All technical skills and soft skills required for working on the selected topic and the preparation of the thesis should be attained.

Competence Certificate

- 'Teilleistung' T-BGU-106803 with oral examination according to § 4 Par. 2 No. 2
details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

Students get familiar with the topic 'Thermal Use of Groundwater' and will be able to integrate their knowledge in particular in an urban water energy nexus. They get knowledge about the fundamentals of thermal transport in groundwater and their application to shallow geothermal systems such as ground source and groundwater heat pump systems. Hence, analytical and numerical simulations will be performed using Excel and Matlab scripted codes. They will be able to perform their own simulations and will be able to design shallow geothermal systems in context of the water energy nexus.

Content

The content of this module is mainly based on the textbook on 'Thermal Use of Shallow Groundwater' and is therefore structured as follows:

- Fundamentals (theory of heat transport in the subsurface)
- Analytical solutions for closed and open systems
- Numerical solutions for shallow geothermal systems
- Long-term operability and sustainability
- Field methods such as thermal tracer tests and thermal response tests (TRT)
- Case studies and applications

Analytical simulations are performed using Excel and Matlab scripted codes. In addition, calibration and validation exercises are performed using existing field and monitoring data. Finally, the students are actively planning an own geothermal system from the application up to the long-term performance of such a system. Hence, a final planning report should be written.

details about the learning control see at the 'Teilleistung'

Prerequisites

none

Competence Goal

The students can describe the legal guidelines regarding the disposal of wastes and the permitted threshold value for brownfields. They can outline the geotechnical concerns in the construction of landfill sites depending on the particular landfill classification, landfill elements, their relevant requirements and necessary certifications. They are able to interlink interdisciplinarily the chemical, mineralogical, biological, hydraulic and geotechnical aspects dealing with brownfields. They can choose reasonably between the relevant remediation technologies and assess their limits of applications and risks.

Content

The module covers geotechnical techniques in dealing with waste and brownfields. The environmental engineering, scientific and legal basics are discussed. Working steps of project planning, building materials, ways of construction and proofs are presented. Techniques for burning and immobilisation are explained as well as different microbiological, electrokinetic, hydraulic and pneumatic soil remediation methods.

Module grade calculation

grade of the module is CP weighted average of grades of the partial exams

Annotation

Competence Goal

Students will be able to describe basic phenomena of meteorology using adequate terminology and explain them with the help of the underlying physical processes.

Content

This lecture is designed to introduce students to the fundamental aspects of meteorology. In addition to the fundamental physical laws of the atmosphere (radiation, thermodynamics, energetics), the composition of air, basic meteorological variables, air motions, and phase transitions of water will be covered.

- (1) Introduction and Overview: Atmosphere, weather and climate
- (2) Composition of air
- (3) Important meteorological variables and state variables.
- (4) Weather elements, weather observations, and introduction to synoptic meteorology.
- (5) Structure of the atmosphere and basic laws
- (6) Radiation
- (7) Thermodynamic fundamentals: state variables and vertical motions
- (8) Condensation processes and precipitation formation
- (9) Dynamical fundamentals: motions and simplified balances

Competence Goal

Students are able to work on an interdisciplinary, water-related project using scientific methods. They can, with guidance, plan, structure, prepare, conduct, and document a study. They are able to select appropriate methods for the solution of the given problem.

Students are able to work self-organized and structured. They possess skills in the field of project management, teamwork and presentation, both orally and in writing.

Content

Conducting a water-related, interdisciplinary project work. This may be of a theoretical and/or experimental type. The focus is on the development of conclusions using scientific methods, project management and presentation of the results.

The project can also be worked on in student teams. In this case, each student works on a particular aspect of an overall problem as part of a joint project.

Students are invited to make suggestions for topics.

It is possible to conduct the project in cooperation with external partners.

Module grade calculation

grade of the module is grade of the exam

Annotation

none

Workload

processing time appr. 3 months

Recommendation

The knowledge and technical and interdisciplinary skills needed to work on the selected topic and to prepare the 'Study Project' should have been acquired.

M

4.63 Module: Supplementary Studies on Culture and Society [M-ZAK-106235]

Responsible: Dr. Christine Mielke
Christine Myglas

Organisation:

Part of: [Additional Examinations](#) (Usage from 4/1/2023)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
22	Grade to a tenth	Each term	3 terms	German	4	1

Election notes

With the exception of the final oral exam and the practice module, students have to self-record the achievements obtained in the Supplementary Studies on Culture and Society in their study plan. ZAK records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the ZAK homepage at <https://www.zak.kit.edu/begleitstudium-bak.php>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use ZAK achievements **both for your interdisciplinary qualifications and for the supplementary studies**, please record them in the interdisciplinary qualifications first. You can then get in contact with the ZAK study services (stg@zak.kit.edu) to also record them in your supplementary studies.

In the in-depth module, achievements have to be obtained in three different areas. The areas are as follows:

- Technology & Responsibility
- Doing Culture
- Media & Aesthetics
- Spheres of Life
- Global Cultures

You have to obtain two achievements with 3 credits each and one achievement with 5 credits. To self-record achievements in the in-depth module, you first have to elect the matching partial achievement.

Note: If you registered for the Supplementary Studies on Sustainable Development before April 1st, 2023, self-recording an achievement in this module counts as a request in the sense of §20 (2) of the regulations for the Supplementary Studies on Culture and Society. Your overall grade for the supplementary studies will thus be calculated as the average of the examination grades, not as the average of the module grades.

Mandatory			
T-ZAK-112653	Basics Module - Self Assignment BAK	3 CR	Mielke, Myglas
In-depth Module (Election: 3 items)

T-ZAK-112657	In-depth Module - Spheres of Life - Self Assignment BAK	3 CR	Mielke, Myglas
T-ZAK-112658	In-depth Module - Global Cultures - Self Assignment BAK	3 CR	Mielke, Myglas
Mandatory			
T-ZAK-112660	Practice Module	4 CR	Mielke, Myglas
T-ZAK-112659	Oral Exam - Supplementary Studies on Culture and Society	4 CR	Mielke, Myglas

Competence Certificate

The monitoring is explained in the respective partial achievement.

They are composed of:

- minutes
- presentations
- a seminar paper
- an internship report
- an oral examination

After successful completion of the supplementary studies, the graduates receive a graded certificate and a KIT certificate.

Prerequisites

The offer is study-accompanying and does not have to be completed within a defined period of time. Enrolment or acceptance for graduation must be present when registering for the final examination.

KIT students register for the supplementary studies by selecting this module in the student portal and self-checking a performance. In addition, registration for the individual courses is necessary, which is possible shortly before the beginning of each semester.

The course catalogue, statutes (study regulations), registration form for the oral exam, and guides for preparing the various written performance requirements can be found as downloads on the ZAK homepage at www.zak.kit.edu/begleitstudium-bak.

Competence Goal

Graduates of the Supplementary Studies on Culture and Society demonstrate a sound basic knowledge of conditions, procedures and concepts for analysing and shaping fundamental social development tasks in connection with cultural topics. They have gained a well-founded theoretical and practical insight into various cultural studies and interdisciplinary topics in the field of tension between culture, technology and society in the sense of an expanded concept of culture.

They are able to place the contents selected from the specialization module in the basic context as well as to analyse and evaluate the contents of the selected courses independently and exemplarily and to communicate about them scientifically in written and oral form. Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective.

Content

The Supplementary Studies on Culture and Society can be started from the 1st semester and is not limited in time. It comprises at least 3 semesters. The supplementary studies are divided into 3 modules (basics, in-depth studies, practice). A total of 22 credit points (ECTS) are earned.

The thematic elective areas of the supplementary studies are divided into the following 5 modules and their sub-topics:

Block 1 Technology & Responsibility

Value change / ethics of responsibility, technology development / history of technology, general ecology, sustainability

Block 2 Doing Culture

Cultural studies, cultural management, creative industries, cultural institutions, cultural policy

Block 3 Media & Aesthetics

Media communication, cultural aesthetics

Block 4 Spheres of Life

Cultural sociology, cultural heritage, architecture and urban planning, industrial science

Block 5 Global Cultures

Multiculturalism / interculturalism / transculturalism, science and culture

Module grade calculation

The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

In-depth Module

- presentation 1 (3 ECTS)
- presentation 2 (3 ECTS)
- seminar paper incl. presentation (5 ECTS)
- oral examination (4 ECTS)

Annotation

With the Supplementary Studies on Culture and Society, KIT provides a multidisciplinary study offer as an additional qualification, with which the respective specialized study program is supplemented by interdisciplinary basic knowledge and interdisciplinary orientation knowledge in the field of cultural studies, which is becoming increasingly important for all professions.

Within the framework of the supplementary studies, students acquire in-depth knowledge of various cultural studies and interdisciplinary subject areas in the field of tension between culture, technology and society. In addition to high culture in the classical sense, other cultural practices, common values and norms as well as historical perspectives of cultural developments and influences are considered.

In the courses, conditions, procedures and concepts for the analysis and design of fundamental social development tasks are acquired on the basis of an expanded concept of culture. This includes everything created by humans - also opinions, ideas, religious or other beliefs. The aim is to develop a modern concept of cultural diversity. This includes the cultural dimension of education, science and communication as well as the preservation of cultural heritage. (UNESCO, 1982)

According to § 16 of the statutes, a reference and a certificate are issued by the ZAK for the supplementary studies. The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

Workload

The workload is made up of the recommended number of hours for the individual modules:

- basic module approx. 90 h
- in-depth module approx. 340 h
- practical module approx. 120 h

total: approx. 550 h

Learning type

- lectures
- seminars
- workshops
- practical course

Literature

Recommended reading of primary and specialized literature will be determined individually by each instructor.

M

4.64 Module: Supplementary Studies on Sustainable Development [M-ZAK-106099]

Responsible: Dr. Christine Mielke
Christine Myglas

Organisation:

Part of: [Additional Examinations](#) (Usage from 4/1/2023)

Credits	Grading scale	Recurrence	Duration	Language	Level	Version
19	Grade to a tenth	Each term	3 terms	German	4	1

Election notes

With the exception of the final oral exam, students have to self-record the achievements obtained in the Supplementary Studies on Sustainable Development in their study plan. ZAK records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the ZAK homepage at <https://www.zak.kit.edu/begleitstudium-bene>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use ZAK achievements **both for your interdisciplinary qualifications and for the supplementary studies**, please record them in the interdisciplinary qualifications first. You can then get in contact with the ZAK study services (stg@zak.kit.edu) to also record them in your supplementary studies.

In the elective module, you need to obtain 6 credits worth of achievements in two of the four areas:

- Sustainable Cities & Neighbourhoods
- Sustainable Assessment of Technology
- Subject, Body, Individual: The Other Side of Sustainability
- Sustainability in Culture, Economy & Society

Usually, two achievements with 3 credits each have to be obtained. To self-record achievements in the elective module, you first have to elect the matching partial achievement.

Note: If you registered for the Supplementary Studies on Sustainable Development before April 1st, 2023, self-recording an achievement in this module counts as a request in the sense of §19 (2) of the regulations for the Supplementary Studies on Sustainable Development. Your overall grade for the supplementary studies will thus be calculated as the average of the examination grades, not as the average of the module grades.

Mandatory			
T-ZAK-112345	Basics Module - Self Assignment BeNe	3 CR	Myglas
Elective Module (Election: at least 6 credits)			
T-ZAK-112347	Elective Module - Sustainable Cities and Neighbourhoods - Self Assignment BeNe	3 CR

Mandatory			
T-ZAK-112346	Specialisation Module - Self Assignment BeNe	6 CR	Myglas
T-ZAK-112351	Oral Exam - Supplementary Studies on Sustainable Development	4 CR	

Competence Certificate

The monitoring is explained in the respective partial achievement .

They are composed of:

- protocols
- a reflection report
- presentations
- presentations
- the elaboration of a project work
- an individual term paper

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by ZAK.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period of time. Enrolment is required for all performance assessments of the modules of the supplementary studies. Participation in the supplementary studies is regulated by § 3 of the statutes.

KIT students register for the supplementary studies by selecting this module in the student portal and self-booking a performance. Registration for courses, performance assessments and examinations is regulated by § 6 of the Statutes and is usually possible shortly before the beginning of the semester.

The course catalogue, statutes (study regulations), registration form for the oral exam and guidelines for preparing the various written performance requirements can be found as downloads on the ZAK homepage at <http://www.zak.kit.edu/begleitstudium-bene>.

Competence Goal

Graduates of the supplementary studies in sustainable development acquire additional practical and professional competencies. Thus, the supplementary study program enables the acquisition of basics and initial experience in project management, trains teamwork skills, presentation skills and self-reflection, and also creates a fundamental understanding of sustainability that is relevant for all professional fields.

Graduates are able to analyse social topics and problem areas and critically reflect on them in a socially responsible and sustainable perspective. They are able to place the contents selected from the modules "Elective" and "Advanced" in the basic context as well as to independently and exemplarily analyse and evaluate the contents of the selected courses and to scientifically communicate about them in written and oral form.

Content

The supplementary study program Sustainable Development can be started from the 1st semester and is not limited in time. The wide range of courses offered by ZAK makes it possible to complete the program usually within three semesters. The supplementary studies comprise 19 credit points (LP). It consists of three modules: Basic Module, Elective Module and Advanced Module.

The thematic elective areas of the supplementary studies are divided into the following 4 modules and their subtopics in Module 2 (elective module):

Block 1 Sustainable Cities and Neighbourhoods

The courses provide an overview of the interaction of social, ecological, and economic dynamics in the microcosm of the city.

Block 2 Sustainability Assessment of Technology

Mostly based on ongoing research activities, methods and approaches of technology assessment are elaborated.

Block 3 Subject, Body, Individual: The other Side of Sustainability

Different approaches are presented to the individual perception, experience, shaping and responsibility of relationships to the environment and to oneself.

Block 4 Sustainability in Culture, Economy & Society

Courses usually have an interdisciplinary approach, but may also focus on one of the areas of culture, economics or society, both in application and in theory.

The core of the supplementary studies is a case study in the specialization area. In this project seminar, students conduct sustainability research with practical relevance themselves. The case study is supplemented by an oral examination with two topics from module 2 (elective module) and module 3 (in-depth module).

Module grade calculation

The overall grade of the supplementary studies is calculated as an average of the grades of the examination performances weighted with credit points.

Elective module

- Presentation 1 (3 ECTS)
- Presentation 2 (3 ECTS)

Advanced module

- individual term paper (6 ECTS)
- oral examination (4 ECTS)

Annotation

The Supplementary Studies on Sustainable Development at KIT is based on the conviction that a long-term socially and ecologically compatible coexistence in the global world is only possible if knowledge about necessary changes in science, economy and society is acquired and applied.

The interdisciplinary and transdisciplinary Studies on Sustainable Development enables diverse access to transformation knowledge as well as basic principles and application areas of sustainable development. According to the statutes § 16, a certificate is issued by the ZAK for the complementary studies.

The achievements are also shown in the transcript of records of the degree program and, upon request, in the certificate. They can also be recognized in the interdisciplinary qualifications (see elective information).

In the specialised studies, modules and partial achievements can be recognised within the framework of the additional achievements or e.g. the interdisciplinary qualifications. This must be regulated via the respective subject study programme.

The focus is on experience- and application-oriented knowledge and competences, but theories and methods are also learned. The aim is to be able to represent one's own actions as a student, researcher and later decision-maker as well as an individual and part of society under the aspect of sustainability.

Sustainability is understood as a guiding principle to which economic, scientific, social and individual actions should be oriented. According to this, the long-term and socially just use of natural resources and the material environment for a positive development of global society can only be addressed by means of integrative concepts. Therefore, "education for sustainable development" in the sense of the United Nations programme plays just as central a role as the goal of promoting "cultures of sustainability". For this purpose, practice-centred and research-based learning of sustainability is made possible and the broad concept of culture established at ZAK is used, which understands culture as habitual behaviour, lifestyle and changing context for social actions.

The supplementary study programme conveys the basics of project management, trains teamwork skills, presentation skills and self-reflection. Complementary to the specialised studies at KIT, it creates a fundamental understanding of sustainability, which is important for all professional fields. Integrative concepts and methods are essential: in order to use natural resources in the long term and to shape the global future in a socially just way, not only different disciplines, but also citizens, practitioners and institutions must work together.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic module approx. 180 h
- Elective module approx. 150 h
- Consolidation module approx. 180 h

Total: approx. 510 h

Learning type

- lectures
- seminars
- workshops

Literature

Recommended reading of primary and specialist literature is determined individually by the respective lecturer.

The examination consists of four parts:

1. active participation in the seminar (presentation ~ 20 mins)
2. active participation in field and lab work
3. documentation of the field experiments (report ~ 10 pages)
4. analysis of field data (presentation ~ 20 mins and report ~10 pages)

Each part is graded with points, and the overall grade is determined by the number of points obtained.

Passing the exam requires at least 1 point in each of the four parts, and in total the minimum number of points.

Prerequisites

none

Recommendation

none

Annotation

The course requires a minimum number of 6 and a maximum number of 30 participants. Please register online for the course (not exam!), 6224807, via the Campus portal (in exceptional cases via e-mail to the responsible lecturer). Participants are selected according to their progress of study considering the following order: students of *Water Science and Engineering*, students of *Civil Engineering*, students of *Geoecology*.

T

5.44 Course: In-depth Module - Doing Culture - Self Assignment BAK [T-ZAK-112655]

Responsible: Dr. Christine Mielke
Christine Myglas

Organisation:

Part of: [M-ZAK-106235 - Supplementary Studies on Culture and Society](#)

Type	Credits	Grading scale	Version
Examination of another type	3	Grade to a third	1

Competence Certificate

At least two presentations must be given: An examination of another kind according to § 5 section 3 (3) in the form of a presentation in one of the chosen courses (3 ECT).

In a third seminar, either (a) a presentation is held (preliminary study achievement) which remains not graded and a topic-related term paper is submitted or (b) a written exam is taken.

The three courses can be selected individually from the 5 thematic blocks or – in exceptional cases and according to the agreement with the responsible lecturer – all three courses can be selected from one block in the sense of a specialization.

In addition, an oral examination is taken, which relates to the content of two of the chosen three courses.

Prerequisites

Prerequisite for the 'Oral Examination' is the successful completion of Modules 1 and 3 and the required elective sections in Module 2.

Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

Annotation

The content of the Basic Modul is helpful.

5.91 Course: Specialisation Module - Self Assignment BeNe [T-ZAK-112346]**Responsible:** Christine Myglas**Organisation:****Part of:** [M-ZAK-106099 - Supplementary Studies on Sustainable Development](#)

Type	Credits	Grading scale	Version
Examination of another type	6	Grade to a third	1

Competence Certificate

The monitoring occurs in the form of several supplementary courses, which usually comprise a presentation of the (group) project, a written elaboration of the (group) project as well as an individual term paper, if necessary with appendices (examination performances of other kind according to statutes § 5 section 3 No. 3 or § 7 section 7).

The presentation is usually with the accompanying practice partners, as well as the written paper.

Prerequisites

Active participation in all three mandatory components.

Self service assignment of supplementary studies

This course can be used for self service assignment of grade acquired from the following study providers:

- Zentrum für Angewandte Kulturwissenschaft und Studium Generale
- ZAK Begleitstudium

Recommendation

Knowledge from 'Basic Module ' and 'Elective Module ' is helpful.

AF	AF801	Hydrogeology	2	2	L/E	-	E
CC	CC921	Instrumental Analysis	6	4	L/P	oE + ngA	E
	CC949	Language Skills	6	4	L/E	ngA	E
P	PA222	Membrane Technologies in Water Treatment	6	3	L/E	wE + ngA	E
	PA323	Modeling Wastewater Treatment Processes	6	4	L/E	EoT	E
	PA982	Applied Microbiology	4	2	L	oE	E

3rd Semester (winter semester)

Hours per week: 7 + Study Project (3 months); credit points: 29; exams: 4

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF801	Hydrogeology	4	1	L/E	wE	E
P	PA223	Practical Course in Water Technology	4	2	L/P	EoT+ ngA	E
	PA621	Water Distribution Systems	6	4	L/E	oE + ngA	E
SP	SP	Study Project	15	-	-	EoT	E

4th Semester (summer semester)

Master's thesis (6 months); credit points: 30; exams: 1

Example Curriculum PB - Fluid Mechanics & Hydraulic Engineering

1st Semester (summer semester)

Hours per week: 20; credit points: 30; exams: 5 (ungraded LC are not counted)

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF401	Advanced Fluid Mechanics	6	4	L/E	wE	E
	AF601	Hydraulic Engineering	6	4	L/E	wE + ngA	E
CC	CC471	Experiments in Fluid Mechanics	6	4	L/E	EoT	E
P	PB523	Fluid Mechanics of Turbulent Flows	6	4	L/E	oE	E
	PB634	River Processes	6	4	L/E	EoT	E

2nd Semester (winter semester)

Hours per week: 20; credit points: 30; exams: 5

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF101	Modeling of Water and Environmental Systems	3	2	L	ngA	E
	AF701	Water and Energy Cycles	6	4	L/E	EoT	E
	AF501	Numerical Fluid Mechanics	6	4	L/E	wE	E
P	PB524	Modeling of Turbulent Flows - RANS and LES	6	4	L/E	oE	E
	PB421	Environmental Fluid Mechanics	6	4	L/E	wE	E
	PB631	Hydraulic Structures	3	2	L/E	wE	E

3rd Semester (summer semester)

Hours per week: 10 + Study Project (3 months); credit points: 30; exams: 4

Subject	Module	Title	CP	HPW	Type	LC	G/E
P	PB631	Hydraulic Structures	3	2	L/E	oE	E
P/SM	PC722	Integrated Design Project in Water Resources Management	6	4	L/E	EoT	E
CC	CC371	Freshwater Ecology	6	4	L/S/E	EoT	E
SP	SP111	Study Project	15	-	-	EoT	E

4th Semester (winter semester)

Master's thesis (6 months); credit points: 30; exams: 1

Example Curriculum PC - Environmental System Dynamics & Management

1st Semester (winter semester)

Hours per week: 19; credit points: 30; exams: 4 (ungraded LC are not counted)

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF101	Modeling of Water and Environmental Systems	3	2	L	ngA	E
	AF201	Fundamentals of Water Quality	6	3	L/E	wE	E
	AF701	Water and Energy Cycles	6	4	L/E	EoT	E
	AF301	Urban Water Infrastructure and Management	6	4	L/E	wE + ngA	E
CC	CC774	Introduction to Environmental Data Analysis and Statistical Learning	6	4	L/E	wE + ngA	E
	CC772	Introduction to Matlab	3	2	L/E	ngA	E

2nd Semester (summer semester)

Hours per week: 22; credit points: 32; exams: 5

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF801	Hydrogeology	2	2	L/E	-	E
CC	CC949	Language Skills	3	2	L/E	ngA	G
P	PC561	Groundwater Management	3	2	L/E	oE	E
	PC725	Subsurface Flow and Contaminant Transport	6	4	L/E	oE	E
	PC731	Hydrological Measurements	6	4	L/P	EoT	E
	PC722	Integrated Design Project in Water Resources Management	6	4	L/E	EoT	E
P/SM	CC773	Analysis of Spatial Data	6	4	L/E	oE	E

3rd Semester (winter semester)

Hours per week: 7 + Study Project (3 months); credit points: 28; exams: 4

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF801	Hydrogeology	4	1	L/E	wE	E
P	PC561	Groundwater Management	3	2	E	EoT	E
P/SM	CC933	Introduction to GIS for Students of Natural, Engineering and Geo Sciences	6	4	L/E	wE+ ngA	G
SP	SP111	Study Project	15	-	-	EoT	E

4th Semester (summer semester)

Master's thesis (6 months); credit points: 30; exams: 1

Example Curriculum PD - Water Resources Engineering

1st Semester (winter semester)

Hours per week: 18; credit points: 30; exams: 4 (ungraded LC are not counted)

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF101	Modeling of Water and Environmental Systems	3	2	L	ngA	E
	AF201	Fundamentals of Water Quality	6	3	L/E	wE	E
	AF301	Urban Water Infrastructure and Management	6	4	L/E	wE + ngA	E
	AF701	Water and Energy Cycles	6	4	L/E	EoT	E
CC	CC772	Introduction to Matlab	3	2	L/E	ngA	E
P	PA221	Water Technology	6	3	L/E	oE	E

2nd Semester (summer semester)

Hours per week: 19; credit points: 30; exams: 5

Subject	Module	Title	CP	HPW	Type	LC	G/E
AF	AF601	Hydraulic Engineering	6	3	L/E	wE	E
P	PA323	Modeling Wastewater Treatment Processes	6	4	L/E	EoT	E
	PB633	River Processes	6	4	L/E	EoT	E
	PC722	Integrated Design Project in Water Resources Management	6	4	L/E	EoT	E
CC	CC774	Analysis of Spatial Data	6	4	L/E	oE	E

3rd Semester (winter semester)

Hours per week: 10 + Study Project (3 months); credit points: 30; exams: 4

Subject	Module	Title	CP	HPW	Type	LC	G/E
P	PA621	Water Distribution Systems	6	4	L/E	oE + ngA	E
P/SM	CC774	Introduction to Environmental Data Analysis and Statistical Learning	6	4	L/E	wE + ngA	E
CC	CC571	Fundamentals of Numerical Algorithms for Engineers	3	2	L	wE	E
SP	SP111	Study Project	15	-	-	EoT	E

4th Semester (summer semester)

Master's thesis (6 months); credit points: 30; exams: 1
